for almost fifteen years both the eu and north atlantic treaty organization nato have claimed to partake in a relationship that is purported to be a strategic partnership

albeit one that is troubled by lasting political blockages the constraints that affect the formal relationship between the two organizations are well covered terrain in the academic literature including by most of the contributors to this volume however the popular argument that the eu and nato simply do not cooperate in any substantive way warrants deeper investigation both theoretically and thematically thus eu nato relations might not at first seem like an under researched area but much of the existing literature on the issue re engages oversimplified and formulaic statements about the nature quality and practice of interactions between the eu and nato this volume aims to develop the eu nato research agenda by pursuing three key objectives 1 reduce the lacuna of theoretically informed analyses of the relationship 2 add empirically and analytically rigorous case studies to the relevant body of literature and 3 point to possible developments and solutions in the strategic partnership the chapters in this book were originally published as a special issue in european security

this book provides a comprehensive assessment of china s military capabilities in 2000 and 2010 with projections for 2020 recognizing that military power encompasses more than weaponry it develops an original empirical framework for measuring militaries that also includes doctrine training and organizational structure

Diving While Sick: A Deep Dive into the Risks and Recommendations

Diving is a thrilling activity, but venturing beneath the surface while unwell can transform a fun-filled adventure into a perilous ordeal. This article aims to clarify the risks associated with diving while sick, explaining the physiological effects of illness on underwater performance and providing guidance on when to postpone your dive. Understanding these risks is crucial for ensuring both your safety and the safety of your dive buddies.

The Physiological Impact of Illness on Diving

Illness compromises your body's ability to function optimally, a critical factor when operating in the challenging environment of underwater pressure changes. Even seemingly minor ailments can significantly exacerbate the risks associated with diving:

- Decompression Sickness (DCS):** Illness weakens your body's ability to cope with the nitrogen build-up that occurs during dives. A weakened immune system, dehydration (often associated with illness), and reduced circulation (common with infections) all increase your susceptibility to DCS, potentially leading to serious complications like joint pain, neurological symptoms, or even paralysis. For example, a simple cold with congestion could impair your body's ability to offload nitrogen effectively, increasing your risk during a deep or long dive.
- Ear and Sinus Problems:** Illnesses affecting your ears and sinuses, such as colds, sinus infections, or ear infections, can cause significant pain during descent and ascent due to pressure changes. The inability to equalize pressure can lead to barotrauma, including ruptured eardrums or sinus injuries. Imagine trying to equalize your ears while already experiencing a painful ear infection—the pressure could cause irreparable damage.
- Respiratory Infections:** Diving with a respiratory infection, like bronchitis or pneumonia, puts immense strain on your already compromised lungs. The exertion of diving, combined with the increased pressure underwater, can severely impact your breathing, leading to shortness of breath, hypoxia (lack of oxygen), and potentially even respiratory failure.
- Weakened Immune System:** Any illness weakens your immune system, making you more vulnerable to infections and other complications. Exposure to cold water, which often lowers body temperature, further compromises your immune response. A minor cut while diving, for instance, could become a serious infection much faster when your body is already fighting off an illness.
- Dehydration:** Many illnesses cause dehydration, which reduces blood volume and can lead to cardiovascular complications under pressure. Dehydration can also affect your cognitive function, crucial for safe diving practices.

When to Postpone Your Dive

The general rule is: if you're unsure, don't dive. If you're experiencing any symptoms of illness, even if mild, it's best to err on the side of caution and postpone your dive.

Specifically, postpone your dive if you have: Any respiratory symptoms: cough, congestion, shortness of breath, or wheezing. Ear or sinus pain or congestion. Fever or chills. Nausea, vomiting, or diarrhea. Severe fatigue or weakness. Any open wounds or skin infections. Even if your symptoms seem minor, consider the potential consequences of diving while unwell. The risk is not worth it.

Mitigation Strategies (Limited Applicability)

While postponing your dive is always the safest option, some mild ailments might seem manageable. However, even then, extreme caution is necessary. Never dive with a cold if you experience significant congestion or ear pain. If you have a minor, non-contagious ailment and are certain your symptoms won't worsen underwater, you might consider diving only in shallow, calm waters and for a shorter duration than usual. Always inform your dive buddy about your condition and monitor yourself closely during and after the dive.

Conclusion

Diving while sick is a dangerous gamble. The risks associated with compromised physiological function underwater are significant and can have severe consequences, ranging from discomfort to life-threatening complications. Prioritizing your health and safety is paramount. Always err on the side of caution and postpone your dive if you're unwell. The breathtaking underwater world will still be there when you're feeling your best.

FAQs

1. Can I dive with a mild cold? Generally, no. Even a mild cold can increase your risk of DCS and barotrauma. 2. What if I only have a slight headache? A headache could indicate other underlying issues and should be checked before diving. 3. Is it safe to dive after taking medication for a cold? Medication may mask symptoms, but it doesn't eliminate the underlying risks associated with diving while ill. 4. Can I dive if I've recently recovered from an illness? Wait until you're fully recovered and feeling 100% before resuming diving activities. 5. What should I do if I experience symptoms after a dive? Seek immediate medical attention and inform the medical professional that you recently dived. Mention any symptoms you experienced before and during the dive.
