deep neural networks have demonstrated great success in many computer vision applications where intelligent recognition and analysis are performed based on high dimensional visual data however in contrast to the rapid development of advanced architectures and training schemes developments have been limited in the theory of analyzing deep neural networks and deep learning training through the lens of geometries the lack of such analysis prevents further understanding and affects the acceptance of deep neural networks for practical applications for example deep neural networks are often challenged by their vulnerability to adversarial attacks their lack of systematic guarantees on effectiveness and stability and their degraded generalization capability outside the distribution of training data

recently increasing interest has been shown in applying the concept of pareto optimality to machine learning particularly inspired by the successful developments in evolutionary multi objective optimization it has been shown that the multi objective approach to machine learning is particularly successful to improve the performance of the traditional single objective machine learning methods to generate highly diverse multiple pareto optimal models for constructing ensembles models and to achieve a desired trade off between accuracy and interpretability of neural networks or fuzzy systems this monograph presents a selected collection of research work on multi objective approach to machine learning including multi objective feature selection multi objective model selection in training multi layer perceptrons radial basis function networks support vector machines decision trees and intelligent systems

cognitive training is not always effective this is also the case for the form of cognitive training that this research topic focuses on prolonged performance on game like cognitive tasks the ultimate goal of this cognitive training is to improve ecologically valid target functions for example cognitive training should help children with adhd to stay focused at school or help older adults to manage the complexity of daily life however so far this goal has proven too ambitious transfer from trained to non trained tasks is not even guaranteed in a laboratory so there is a strong need for understanding how when and for how long cognitive training has effect which cognitive functions are amenable to game training for whom and how are there mediating factors for success such as motivation attention or age are the improvements real or can they be attributed to nonspecific factors such as outcome expectancy or demand characteristics are there better strategies to improve cognitive functions through game training this research topic of frontiers in human neuroscience charts current insights in the determinants of success of game training

in psycholinguistic research there has traditionally been a strong emphasis on understanding how particular language types are processed and learned in particular romance and germanic languages e g english french german have until recently received more attention than other types such as chinese languages this has led to selective emphasis on the phonological building blocks of european languages consonants and vowels to the exclusion of lexical tones which like consonants and vowels determine lexical meaning but unlike consonants and vowels are based on pitch variations lexical tone is pervasive it is used in at least half of the world languages maddieson 2013 e g most asian and some african central american and european languages this research topic brings together a collection of recent empirical research on the processing and representation of lexical tones across the lifespan with an emphasis on advancing knowledge on how tone systems are acquired the articles focus on various aspects of tone early perception of tones influences of tone on word learning the acquisition of new tone systems and production of tones one set of articles report on tone perception at the earliest stage of development in infants learning either tone or non tone languages tsao and chen et al demonstrate that infants sensitivity to mandarin lexical tones as well as pitch improves over the first year of life in native and non native learners in contrast to traditional accounts of perceptual narrowing for consonants and vowels götz et al report a different pattern of perception for cantonese tones and further demonstrate influences of methodological approaches on infants tone sensitivity fan et al demonstrate that sensitivity to less well studied properties of tone languages such as neutral tone may develop after the first year of life cheng and lee ask a similar question in an electrophysiological study and report effects of stimulus salience on infants neural response to native tones in a complementary set of studies focused on tone sensitivity in word learning burnham et al demonstrate that infants bind tones to newly learned words if they are learning a tone language either monolingually or bilingually although it was also found that object word binding was influenced by the properties of individual tones liu and kager chart a developmental trajectory over the second year of life in which infants narrow in their interpretation of non native tones choi et al investigate how learning a tone language can influence uptake of other suprasegmental properties of language such as stress and demonstrate that native tone sensitivity in children can facilitate stress sensitivity when learning a stress based language finally two studies focus on sensitivity to pitch in a subclass tone languages pitch accent languages in a study on japanese children s abilities to recognise words they know ota et al demonstrate a limited sensitivity to native pitch contrasts in toddlers in contrast ramachers et al demonstrate comparatively strong

sensitivity to pitch in native and non native speakers of a different pitch accent system limburghian when learning new words several studies focus on learning new tone systems in a training study with school aged children kasisopa et al demonstrate that tone language experience increases children s abilities to learn new tone contrasts poltrock et al demonstrate similar advantages of tone experience in learning new tone systems in adults and in an electrophysiological study liu et al demonstrate order effects in adults neural responses to new tones discussing implications for learning tone languages as an adult finally hannah et al demonstrate that extralinguistic cues such as facial expression can support adults learning of new tone systems in three studies investigating tone production rattansone et al report the results of a study demonstrating kindergartners asynchronous mastery of tones delayed acquisition of tone sandhi forms relative to base forms in a study interrogating a corpus of adult tone production han et al demonstrate that mothers produce tones in a distinct manner when speaking to infants tone differences are emphasised more when speaking to infants than to adults combining perception and production of tones wong et al report asynchronous development of tone perception and tone production in children the research topic also includes a series of opinion pieces and commentaries addressing the broader relevance of tone and pitch to the study of language acquisition curtin and werker discuss ways in which tone can be integrated into their model of infant language development primir best discusses the phonological status of lexical tones and considers how recent empirical research on tone perception bears on this question kager focuses on how language learners distinguish lexical tones from other sources of pitch variation e g affective and pragmatic that also inform language comprehension finally antoniou and chin unite evidence of tone sensitivity from children and adults and discuss how these areas of research can be mutually informative psycholinguistic studies of lexical tone acquisition have burgeoned over the past 13 years this collection of empirical studies and opinion pieces provides a state of the art panoply of the psycholinguistic study of lexical tones and demonstrate its coming of age the articles in this research topic will help address the hitherto eurocentric non tone language research emphasis and will contribute to an expanding narrative of speech perception speech production and language acquisition that includes all of the world s languages importantly these studies underline the scientific promise of drawing from tone languages in psycholinguistic research the research questions raised by lexical tone are unique and distinct from those typically applied to more widely studied languages and populations the comprehensive study of language acquisition can only benefit from this expanded focus

# Unraveling the Mystery: What is a Legend?

Legends, those captivating tales woven into the fabric of cultures across the globe, often blur the lines between fact and fiction. This article aims to dissect the very essence of a legend, exploring its defining characteristics, differentiating it from myths and folktales, and examining its lasting impact on societies. We'll delve into the reasons behind their creation and persistence, uncovering the power these stories hold to shape our understanding of the world and ourselves.

## I. Defining a Legend: More Than Just a Story

At its core, a legend is a narrative, often traditional, that is widely believed to be based on historical events or figures, even if its details are exaggerated, embellished, or entirely fictionalized. Unlike myths, which typically explain the origins of the world or natural phenomena through supernatural means, legends focus on specific individuals, places, or events that are rooted – or at least perceived to be rooted – in a real historical context. This perceived connection to reality is a crucial distinction. The key ingredient is the element of believability, however tenuous. Legends are told and retold, often accumulating layers of detail and variation with each iteration, transforming over time and evolving to reflect the cultural values and anxieties of the communities that preserve them. This organic evolution distinguishes legends from fabricated stories; they are the product of collective memory and cultural transmission.

## II. Key Characteristics of a Legend

Several key features help identify a legend: Historical Anchoring (Real or Perceived): Legends often involve a historical setting or figure, however loosely connected. For

example, the legend of Robin Hood, while not historically accurate in its depiction, is anchored in the historical context of the English Sherwood Forest and the socio-political conflicts of the medieval era. **Emphasis on the Extraordinary:** Legends often feature extraordinary feats, superhuman abilities, or remarkable events. These elements make the story memorable and contribute to its widespread circulation. Think of the legend of King Arthur and his magical sword, Excalibur. **Moral or Didactic Element:** Many legends, while focusing on extraordinary events, also convey moral lessons, values, or warnings. The legend of the Loch Ness Monster, for instance, might be interpreted as a warning against unchecked industrial development or a celebration of the mystery and power of nature. **Oral Tradition:** Legends are typically passed down through generations via oral storytelling before eventually being recorded in written form. This oral transmission contributes to variations and adaptations of the story. **Cultural Significance:** Legends reflect and reinforce the cultural values, beliefs, and anxieties of a particular society. They can serve to explain social norms, justify historical events, or consolidate community identity.

### III. Distinguishing Legends from Myths and Folktales

While often conflated, legends, myths, and folktales possess distinct characteristics. Myths often explain the origins of the universe, gods, or natural phenomena, lacking a concrete historical basis. Folktales, on the other hand, are primarily fictional narratives aimed at entertainment and often lack a strong connection to any specific historical period or location. Legends occupy a middle ground, blending elements of perceived reality and extraordinary events within a (however loosely) historical framework.

### IV. Examples of Legends across Cultures

Legends permeate diverse cultures. The legend of El Dorado, the mythical city of gold, captivated European explorers for centuries. In Japan, the legend of the Kappa, a mischievous water goblin, serves as a cautionary tale for children. The American Wild West is rife with legends of outlaws, gunfighters, and lost gold mines, contributing to the region's unique cultural identity. These examples highlight the universality and enduring power of legendary narratives.

## V. The Enduring Power of Legends

Legends persist because they fulfill vital cultural functions. They entertain, educate, transmit values, and provide a sense of shared identity. They offer explanations for the unexplained, comfort in times of uncertainty, and inspiration in moments of adversity. Their enduring appeal stems from their ability to connect us to the past, while also reflecting our present concerns and aspirations.

## Conclusion

Legends are more than just stories; they are powerful cultural artifacts that shape our understanding of history, identity, and the world around us. By examining their characteristics, distinguishing them from other narrative forms, and exploring their enduring appeal, we gain a deeper appreciation for the richness and complexity of human culture and storytelling.

## FAQs

1. Are legends always true? No, legends are not always factually accurate. They often blend historical elements with fictional embellishments. Their value lies in their cultural significance and the way they reflect societal values. 2. How do legends change over time? Legends evolve through oral transmission, with each retelling adding or altering details, adapting to the changing cultural context. 3. What is the difference between a legend and a myth? Myths explain cosmological origins, while legends focus on historical figures or events, even if embellished. 4. Can a legend be about a real person? Yes, legends can be based on real historical figures, but their narratives often exaggerate or fictionalize aspects of their lives. 5. What makes a legend "catchy"? The combination of a compelling narrative, extraordinary elements, and a relatable moral or thematic resonance contributes to a legend's memorability and enduring appeal.
