although workplace design and management are gaining more and more attention from modern organizations workplace research is still very fragmented and spread across multiple disciplines in academia there are several books on the market related to workplaces facility management fm and corporate real estate management crem disciplines but few open up a theoretical and practical discussion across multiple theories from different disciplines therefore workplace researchers are not aware of all the angles from which workplace management and effects of workplace design on employees has been or could be studied a lot of knowledge is lost between disciplines and sadly many insights do not reach workplace managers in practice therefore this new book series is started by associate professor rianne appel meulenbroek eindhoven university of technology the netherlands and postdoc researcher vitalija danivska aalto university finland as editors published by routledge it is titled transdisciplinary workplace research and management because it bundles important research insights from different disciplinary fields and shows its relevance for both academic workplace research and workplace management in practice the books will address the complexity of the transdisciplinary angle necessary to solve ongoing workplace related issues in practice such as knowledge worker productivity office use and more strategic management in addition the editors work towards further collaboration and integration of the necessary disciplines for further development of the workplace field in research and in practice this book series is relevant for workplace experts both in academia and industry this second book in the series focuses on the role of workplace management in the organization and the tasks that workplace management needs to consider the 18 theories that are presented in this book and applied to workplace research discuss management aspects from the organization s perspective or dive deeper into issues related to people and or building management they all emphasize that workplace management is a complex matter that requires more strategic attention in order to add value for various stakeholders the final chapter of the book

describes a first step towards integrating the presented theories into an interdisciplinary framework for developing a grand workplace management theory

efficiency in public and freight transportation systems is of great importance for a society railways can offer high capacity and relatively low environmental impact but require that several technical systems are tuned and operate well specifically there is a tight interdependency between infrastructure and trains the consequences are that all subsystems must be maintained and that the coordination of infrastructure activities and train operations is essential railway infrastructure maintenance and train services should ideally be planned together but practice and research about railway scheduling has historically focused mainly on train operations and timetabling while maintenance planning has received less attention and little research have considered the joint scheduling of both types of activities instead the traditional approach has been a sequential and iterative planning procedure where train timetabling often has precedence over infrastructure maintenance this thesis studies how maintenance windows which are regular time windows reserved for maintenance work can be dimensioned and jointly scheduled with train services in a balanced and efficient way for both

maintenance contractors and train operators mathematical methods are used with the aim of advancing the knowledge about quantitative methods for solving such coordination problems the thesis contributes with new optimization models that jointly schedule maintenance windows and train services investigates the solving efficiency of these models and studies crucial extensions of the planning problem primarily for the consideration of maintenance resources furthermore the models are applied to verified and validated on a demanding real life problem instance the main results are that integrated and optimal scheduling of maintenance windows and train services is viable for problems of practical size and importance and that substantial maintenance cost savings can be achieved with such an integrated approach as compared to a traditional sequential planning process the thesis consists of an introduction and overview of the research followed by six papers which present 1 a cost benefit model for assessment of competing capacity requests at a single location 2 an optimization model for integrated scheduling of both maintenance windows and train services 3 mathematical reformulations that strengthen the optimization model 4 extensions for handling resource considerations and cyclic schedules 5 a case study for a major single track line in sweden and 6 a mathematical study of length restricted sequences under cyclic conditions

this is the second part of a major theoretical work by patrik schumacher which outlines how the discipline of architecture should be understood as its own distinct system of communication autopoeisis comes from the greek and means literally self production it was first adopted in biology in the 1970s to describe the essential characteristics of life as a circular self organizing system and has since been transposed into a theory of social systems this new approach offers architecture an arsenal of general comparative concepts it allows architecture to be understood as a distinct discipline which can be analyzed in elaborate detail while at the same time offering insightful comparisons with other subject areas such as art science and political discourse on the basis of such comparisons the book insists on the necessity of disciplinary autonomy and argues for a sharp demarcation of design from both art and engineering schumacher accordingly argues controversially that design as a discipline has its own sui generis intelligence with its own internal logic reach and limitations whereas the first volume provides the theoretical groundwork for schumacher s ideas focusing on architecture as an autopoeitic system with its own theory history medium and its unique societal function the second volume addresses the specific contemporary challenges and tasks that architecture faces it formulates these tasks looking specifically at how architecture is seeking to organize and articulate the complexity of post fordist network society the volume explicitly addresses how current architecture can upgrade its design methodology in the face of an increasingly demanding task environment characterized by both complexity and novelty architecture s specific role within contemporary society is explained and its relationship to politics is clarified finally the new global style of parametricism is introduced and theoretically grounded

integer programing is one of the most fascinating and difficult areas in the field of mathematical optimization due to this fact notable research contributions to integer programming have been made in very different branches of mathematics and its applications since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field i initiated this compilation of literature in 1970 at the institut fur konometrie und operations research university of bonn since then many collaborators have contributed to and worked on it

among them dipl math claus kastning has done the bulk of the work with great perseverance and diligence he has gathered all the material and checked it with the original sources the main aim was to incorporate rare and not easily accessible sources like russian journals preprints or unpublished papers without the invaluable and dedicated engagement of claus kastning the bibliography would never have reached this final version for this reason he must be considered its responsible editor as with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete we have however tried to be as complete as possible the bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries

Decoding Loneliness: An Exploration of "Loneliness Rhyme"

Loneliness, a universal human experience, often feels isolating and overwhelming. While not a clinical diagnosis itself, it's a significant contributor to various mental health challenges. Understanding its nuances is crucial for fostering well-being. This article explores the concept of "loneliness rhyme," a metaphorical framework to grasp the cyclical and self-perpetuating nature of loneliness. We'll dissect this idea, providing practical strategies to break free from its grip.

What is "Loneliness Rhyme"?

"Loneliness rhyme" isn't a formally recognized psychological term, but a helpful metaphor to describe the repeating pattern of thoughts, feelings, and behaviors associated with prolonged loneliness. It highlights the cyclical nature of the experience: loneliness leads to certain actions (or inaction), which further reinforces feelings of loneliness. This cycle repeats, creating a self-perpetuating "rhyme" or pattern. Think of it like a song stuck on repeat – unpleasant and hard to stop.

The Cycle of Loneliness Rhyme: A Closer Look

The loneliness rhyme often unfolds in a predictable sequence. It begins with the feeling of loneliness, a subjective experience marked by isolation, emptiness, and a lack of meaningful connection. This feeling triggers negative thoughts, such as "I'm unlovable," "No one cares about me," or "I'll always be alone." These thoughts, in turn, influence behavior. This can manifest in withdrawal from social

situations, avoidance of opportunities for connection, or engaging in behaviors that push others away (e.g., irritability, negativity). This behavior then results in further social isolation, confirming the initial feelings of loneliness, and the cycle begins again. Example: Imagine Sarah, who feels lonely after a recent breakup. She believes she's unlovable (negative thought), leading her to avoid social gatherings and decline invitations (behavior). This isolation reinforces her feeling of loneliness, strengthening the belief that she's unlovable, perpetuating the cycle.

Breaking the Loneliness Rhyme: Strategies for Change

Recognizing the pattern is the first step towards breaking the loneliness rhyme. Several strategies can disrupt this cycle: **Challenge Negative Thoughts:** Actively identify and challenge negative thoughts. Are they truly accurate? Replace them with more balanced and realistic perspectives. For Sarah, she could acknowledge the pain of the breakup but remind herself that her worth isn't defined by one relationship. **Engage in Self-Compassion:** Treat yourself with kindness and understanding. Loneliness is a difficult emotion; acknowledge its validity without judgment. Practice self-soothing techniques like mindfulness or deep breathing. **Gradual Social Exposure:** Start small. Reconnect with existing friends or family members. Join a group related to your interests, even if it feels daunting. Small steps lead to significant progress. Sarah could start by attending a book club or joining a hiking group. **Seek Professional Support:** A therapist can provide guidance and tools to manage loneliness and address underlying mental health concerns that might be contributing to the feeling. They can help identify and challenge negative thought patterns and develop coping mechanisms. **Cultivate Meaningful Activities:** Engaging in activities that provide purpose and fulfillment can combat loneliness. This could involve volunteering, pursuing a hobby, or setting personal goals. Finding meaning outside of social relationships can boost self-esteem and reduce feelings of isolation.

Key Insights and Actionable Takeaways

Understanding the cyclical nature of loneliness, as represented by the "loneliness rhyme," empowers us to proactively interrupt the negative pattern. By actively challenging negative thoughts, engaging in self-compassion, and gradually increasing social interaction, we can create a more positive and fulfilling experience. Remember, breaking this cycle takes time and effort, but it's absolutely achievable.
