this work is divided into two autonomous books the first book the state represents a radically new political system of society one which is the most democratic system ever possible this is a completely new society a real civil society which otherwise in the capitalist system is only a utopia in this book i scrutinize the principles of scientific socialism i e all those principles of marxism concerning the state that build socialism as a political system the second book the economic theory of socialism is a sequel and as far as i know the only sequel of the greatest work by karl marx capital the economics of socialism makes marx s socialism already completely possible in this book i scrutinize the economic laws that build socialism as a more effective economic system than capitalism these laws are extracted from marx s main work capital from 1917 to 1991 the totalitarian system in ussr and east europe was called socialism and even by the scientific nonsense and absurd names of communism and communist system in this system the official ideology was allegedly marxism but really it could not endure any marxist criticism there was never any socialism anywhere in the twentieth century we passed through a system of utopian socialism as proof that this was not socialism that was not possible but for the utopia of writers before and after marx we were visited by a utopian socialism which at the contemporary stage is simply capitalism state monopolistic there is no better application of keynes s doctrine than the socialism of the twentieth century his planned capitalism is actually planned socialism

## Tip on 38: Understanding and Applying the Rule of 38

The "Rule of 38" is a simple yet powerful tool used primarily in the finance industry, particularly in the context of loan amortization and evaluating the performance of debt instruments. This rule provides a quick estimate of the total time it will take to repay a loan or for an investment to reach its maturity, based on the interest rate and payment amount. It's not a precise calculation but offers a helpful benchmark, allowing for efficient assessment and comparison of different financing options or investments. This article will delve into the mechanics of the Rule of 38, exploring its applications and limitations through detailed explanations and illustrative examples.

### Understanding the Formula

The Rule of 38 states that the sum of the interest rate (as a percentage) and the payment percentage (also as a percentage of the outstanding balance) should roughly equal 38. This relationship is expressed as:  $\text{Interest Rate (\%)} + \text{Payment Percentage (\%)} \approx 38$ . The "payment percentage" refers to the portion of the outstanding loan balance paid off during a specific period, usually a month or a year. It is calculated by dividing the principal payment for the period by the beginning balance of the period and multiplying by 100. For example, if your monthly interest rate is 1% and your monthly payment covers 2% of the initial loan amount, then  $1\% + 2\% = 3\%$ , which is significantly below 38. This suggests a longer repayment period than a loan where the sum is closer to 38.

### Practical Applications of the Rule of 38

The primary application of the Rule of 38 lies in assessing loan amortization schedules. By estimating the sum of the interest rate and the payment percentage, one can quickly determine the approximate time it will take to pay off a loan. This is particularly useful in comparing different loans with varying interest rates and payment schedules. A loan with a higher interest rate will require a larger payment percentage to reach the 38 threshold, indicating a faster amortization. Consider two loans: Loan A: 5% annual interest rate, 10% annual payment percentage. ( $5\% + 10\% = 15\%$ ) This indicates a longer repayment period. Loan B: 8% annual interest rate, 30% annual payment percentage. ( $8\% + 30\% = 38\%$ ) This suggests a much quicker repayment. The Rule of 38 is also applicable in assessing the performance of amortizing bonds or other debt instruments. It can provide a quick estimate of the time to maturity or the time until a significant portion of the principal is repaid. This is helpful in portfolio management and investment decision-making.

## Limitations of the Rule of 38

It is crucial to understand that the Rule of 38 is an approximation. It does not account for factors such as compounding, variations in payment amounts, or irregular payment schedules. It provides a rough estimate, and a precise calculation requires a full amortization schedule. Furthermore, the accuracy of the rule diminishes as the loan term becomes shorter or longer. The Rule of 38 is most effective for loans with relatively consistent monthly payments and a fixed interest rate. Variable-rate loans or loans with balloon payments will significantly impact the accuracy of the estimation.

## Calculating the Approximate Loan Term Using the Rule of 38

While the Rule of 38 itself doesn't directly give the loan term, it helps estimate it by considering the speed of repayment. If the sum of the interest rate and payment percentage is significantly less than 38, it indicates a longer repayment period, while a sum close to 38 points to a shorter one. For a more precise calculation of the loan term, you would need to use a loan amortization calculator or a financial spreadsheet.

## Summary

The Rule of 38 is a valuable heuristic in finance, offering a quick and straightforward method to assess the approximate repayment time of a loan or the maturity of a debt instrument. While not a precise calculation, it provides a useful benchmark for comparison and preliminary assessment. Understanding its limitations - primarily its reliance on simplified assumptions and its lack of consideration for complex scenarios - is crucial for accurate financial analysis. Remember to utilize full amortization schedules or specialized financial tools for precise calculations.

## FAQs

1. Q: Can I use the Rule of 38 for all types of loans? A: While applicable to many loans, it works best for loans with fixed interest rates and consistent monthly payments. Its accuracy decreases with variable rates or irregular payments. 2. Q: What if the sum of the interest rate and payment percentage is greater than 38? A: This suggests a very aggressive repayment schedule, potentially leading to early loan payoff. However, the Rule of 38 is not designed to handle scenarios far exceeding 38; it primarily provides insight into slower repayment. 3. Q: Is the Rule of 38 more accurate for short-term or long-term loans? A: It tends to be less accurate for very short-term loans, as the simplifying

assumptions involved become more significant. Accuracy is generally better for longer-term loans. 4. Q: How does compounding affect the Rule of 38's accuracy? A: The Rule of 38 simplifies the calculation and doesn't explicitly account for compounding interest. This can lead to discrepancies, especially over longer periods. 5. Q: Can I use the Rule of 38 for investments besides loans? A: While primarily used for loans and debt instruments, the principle of relating interest/yield and repayment/principal reduction can be conceptually applied to other investments with amortizing features to get a rough estimate of the time to maturity or return of principal. However, using it outside the context of amortizing debt requires careful consideration of its limitations.
