acclaimed as the the most objective prosecutors in the world the german prosecution service has long attracted the attention in the past of comparative law scholars at first glance the institutional position and statutory mandate of german prosecutors indicate that that reputation is well deserved unfortunately the introduction of charge bargaining has opened the door to criticism that german prosecutors have abandoned their role of objective decision makers using interview data collected from interviews with german prosecutors themselves as well as quantitative data the book uses the actual voices of german prosecutors to show how real world constraints rather than changes in the law undermine the ability of german prosecutors to objectively seek the truth the book will take readers behind closed doors where prosecutors discuss case decisions and unveil the realities of practice as a result it will

critically revise previous studies of german prosecution practices and offer readers a well researched ethnographic analysis of actual german decision making practices and the culture of the prosecution service unlike prosecutors in america s adversarial system whom critics claim are driven by a conviction mentality and gamesmanship german prosecutors are institutionally positioned to function as at least semi judicial officials dedicated to finding a case s objective truth the book argues that organizational incentives and norms rather than the boundaries of the law determinately shapes how prosecutors investigate and prosecute crime in germany

the changes in the machinery of government announced in june 2007 led to this assessment of the place of the department for international development dfid in trade policy structures and how this area could be best managed across government the inquiry also followed up on the report conflict and development peacebuilding and post conflict reconstruction hc 923 i 2005 06 and the responsibility of the former department of trade and industry in relation to the regulation of activities of uk companies operating in developing countries although the reaction to the changes in the machinery of government are broadly positive there are reservations about complexity unclear lines of accountability and new layers of bureaucracy the increase in the number of dfid ministers is welcomed but there are concerns that the brief of the trade policy minister might be too wide

this publication presents the proceedings of the third conference of prosecutors general and other senior prosecutors throughout europe which was held in slovenia in may 2002 the conference discussed the role of public prosecution in the criminal justice system in the light of recommendation rec 2000 19 of the committee of ministers of the council of europe in particular it examines the relations between public prosecutors and the judiciary as well as the issue of ethics of individual prosecutors

the american prosecutor plays a powerful role in the judicial system wielding the authority to accept or decline a case choose which crimes to allege and decide the number of counts to charge these choices among others are often made with little supervision or institutional oversight this prosecutorial discretion has prompted scholars to look to the role of prosecutors in europe for insight on how to reform the american system of justice in the prosecutor in transnational perspective erik luna and marianne wade through

the works of their contributors coupled with their own analysis demonstrate that valuable lessons can be learned from a transnational examination of prosecutorial authority they examine both parallels and distinctions in the processes available to and decisions made by prosecutors in the united states and europe ultimately they demonstrate how the enhanced role of the prosecutor represents a crossroads for criminal justice with weighty legal and socio economic consequences

900mm to ft: A Comprehensive Guide to Metric–Imperial Conversion

This article provides a detailed explanation of how to convert 900 millimeters (mm) to feet (ft), addressing the common need to translate between the metric and imperial systems of measurement. We will explore the conversion process, provide practical examples, and address frequently asked questions to ensure a thorough understanding of this fundamental conversion.

Understanding the Metric and Imperial Systems

Before diving into the conversion, it's crucial to understand the basis of both systems. The metric system, predominantly used worldwide, is based on powers of 10, making conversions relatively straightforward. Its fundamental unit of length is the meter (m). The millimeter (mm) is a smaller unit, representing one-thousandth of a meter ($1 \text{ mm} = 0.001 \text{ m}$). The imperial system, primarily used in the United States and a few other countries, employs units like inches, feet, yards, and miles. A foot (ft) is a common unit of length, with 12 inches comprising a single foot. Converting between the metric and imperial systems requires understanding the relationship between their base units.

The Conversion Factor: Millimeters to Feet

The key to converting 900 mm to feet lies in the conversion factor. One meter is approximately equal to 3.28084 feet. Therefore, to convert millimeters to feet, we need a two-step process: 1. Convert millimeters to meters: Since $1000 \text{ mm} = 1 \text{ m}$, we divide 900 mm by 1000 to get 0.9 m. 2. Convert meters to feet: Multiply the result from step 1 (0.9 m) by the conversion factor 3.28084 ft/m. This yields $0.9 \text{ m} \times 3.28084 \text{ ft/m} \approx 2.95276 \text{ ft}$. Therefore, 900 mm is approximately equal to 2.95 feet.

Rounding and Precision

The result of 2.95276 ft is a precise figure. However, in most practical applications, rounding to a suitable level of precision is necessary. For instance, a carpenter might round to 2.95 ft for sufficient accuracy, while an engineer might require more decimal places for greater precision depending on the project. The level of precision needed depends entirely on the context of the measurement.

Practical Examples and Scenarios

Let's consider a few scenarios where this conversion might be relevant: Home Improvement: You are planning to install a new shelf that is 900 mm long. Knowing that this is approximately 2.95 ft helps you determine if it will fit your available space. Engineering: You are designing a component for a machine and need to convert a metric dimension (900 mm) to its imperial equivalent (approximately 2.95 ft) for compatibility with other parts. Construction: You are working on a building project and need to ensure consistent measurements across different design documents using metric and imperial units. Converting 900 mm to its approximate foot equivalent helps maintain consistency.

Using Online Conversion Tools

Many online conversion tools are available to simplify this process. These tools often provide more decimal places and handle the calculation automatically. Simply input the value in millimeters, select feet as the target unit, and the tool will calculate the conversion. This is particularly useful when dealing with multiple conversions or needing a high degree of accuracy.

Summary

Converting 900 mm to feet involves a straightforward two-step process: converting millimeters to meters, and then meters to feet using the appropriate conversion factor (approximately 3.28084 ft/m). The result, approximately 2.95 feet, needs to be rounded to a level of precision appropriate to the specific application. Understanding this conversion is vital for anyone working across metric and imperial units, from DIY enthusiasts to professional engineers.

Frequently Asked Questions (FAQs)

1. Is 3.28084 ft/m an exact conversion factor? No, it's an approximation. The exact conversion factor is 3.280839895 feet per meter. The level of precision needed dictates how many decimal places are used. 2. Can I use a different conversion factor? While other approximations exist, using the standard conversion factor (around 3.28084) ensures consistency and accuracy. 3. What if I need to convert feet to millimeters? Reverse the process. Divide the value in feet by 3.28084 to get meters, then multiply by 1000 to get millimeters. 4. Are there any potential sources of error in this conversion? The primary source of error is rounding. Using more decimal places in the conversion factor minimizes this error. 5. Why is it important to know this conversion? It bridges the gap between the metric and imperial systems, allowing for seamless collaboration and understanding across different units of

measurement in various fields.
