the study reported in this volume adds to the growing body of evaluation studies that focus on the use of nsf funded standards based high school mathematics curricula most previous evaluations have studied the impact of field test versions of a curriculum since these innovative curricula were so new at the time of many of these studies students and teachers were relative novices in their use these earlier studies were mainly one year or less in duration students in the comparison groups were typically from schools in which some classes used a standards based curriculum and other classes used a conventional curriculum rather than using the standards based curriculum with all students as curriculum developers intended the volume reports one of the first studies of the efficacy of standards based mathematics curricula with all of the following characteristics the study focused on fairly stable implementations of a first edition standards based high school mathematics curriculum that was used by all students in each of three schools it involved

students who experienced up to seven years of standards based mathematics curricula and instruction in middle school and high school it monitored students mathematical achievement beliefs and attitudes for four years of high school and one year after graduation prior to the study many of the teachers had one or more years of experience teaching the standards based curriculum and or professional development focusing on how to implement the curriculum well in the study variations in levels of implementation of the curriculum are described and related to student outcomes and teacher behavior variables item data and all unpublished testing instruments from this study are available at wmath.edu/cmp for use as a baseline of instruments and data for future curriculum evaluators or core plus mathematics users who may wish to compare results of new groups of students to those in the present study on common tests or surveys taken together this volume the supplement at the [cmp](http://wmath.edu/cmp) site and the first edition core plus mathematics curriculum materials samples of which are also available at the site serve as a fairly complete description of the nature and impact of an exemplar of first edition nsf funded standards based high school mathematics curricula as it existed and was implemented with all students in three schools around the turn of the 21st century

program is designed to provide high school students with the opportunity to pursue college level studies while still attending high school in turn the participating colleges grant credit and or advanced placement to students who do well on the examination the ap statistics course is designed to represent the content of a typical introductory college course in statistics the full year course covers the skills and knowledge expected of students in the field of introductory statistics the course is intended for high school students who wish to complete studies equivalent to a one semester non calculus based college course in statistics additional information about the ap program and the ap statistics exam is available by contacting ap services educational testing service p o box 6671 princeton nj 08541 6671 phone 609 771 7300 fax 609 530 0482 e mail apexams ets org website collegeboard com the ap statistics exam the ap statistics exam lasts 180 minutes and is divided into two sections i multiple choice 50 of your grade this 90 minute section is composed of 35 questions designed to test your proficiency in a wide variety of topics the questions test examinees ability to explore data plan a statistical study anticipate patterns and make statistical inferences ii free response a combined 50 of your grade this 90 minute section requires the student to answer four to seven open ended questions and to complete one investigative task question involving more extended reasoning each open ended question has been created to be answered in approximately 10 minutes the longer investigative task question has been created to be answered in approximately 30 minutes the questions require students to relate different content areas as they plan an extensive solution to a statistics or probability problem students are expected to use their analytical and organizational skills to formulate cogent answers in writing their responses it will be expected that students will show enough of their work to allow the readers to be able to follow their logic note that it is not necessary to write out routine statistical calculations that can be done on a calculator each student is expected to bring a calculator with statistical capabilities to the examination the computational capabilities of the calculator should include common univariate and bivariate summaries through linear regression the graphical capabilities of the calculator should include common univariate and bivariate displays such as boxplots histograms and scatterplots most graphing calculators on the market are acceptable non graphing calculators are allowed only if they have the computational capabilities described previously the following however are not permitted powerbooks and portable computers pocket organizers electronic writing pads pen input devices or devices with typewriter style or qwerty keyboards about the review sections as mentioned earlier this book has a review chapter for each of the four topics covered on the exam the following are the four review chapters in this book that cover the topics on the ap statistics exploring data planning a study anticipating patterns statistical inferences the review chapters provide a thorough discussion of the material tested on the exam by studying the review chapters and by taking the practice test s you can prepare yourself to score high on the ap statistics exam scoring the exam the multiple choice section of the exam is scored by crediting each correct answer with one point and deducting one fourth of a point for each incorrect answer unanswered questions receive neither credit nor deduction the free response questions are graded by readers chosen from around the country for their familiarity with the ap program each free response question is read and scored with the reader providing the score on a 0 to 4 0 being the

lowest and 4 the highest scale the free response questions are scored based on the statistical knowledge and communication the student used to answer the question the statistical knowledge criteria include identifying the important concepts of the problem and demonstrating statistical concepts and techniques that result in a correct solution of the problem the communication criteria include an explanation of what was done and why along with a statement of conclusions drawn once the free response questions have been graded by all of the readers the scores are converted the open ended questions count as 75 of the free response score the investigative task question counts as 25 scoring the multiple choice section for the multiple choice section use this formula to calculate your raw score number right number wrong $\times 1.4$ raw score round to the nearest whole number note do not include unanswered questions in the formula scoring the free response questions for the free response section use this formula to calculate your raw score 5 open ended questions 75 1 investigative task question 25 raw score the composite score to obtain your composite score use the following method multiple choice raw score free response raw score raw score ap grades are interpreted as follows 5 extremely well qualified 4 well qualified 3 qualified 2 possibly qualified and 1 no recommendation scores that receive college credit and or advanced placement most colleges grant students who earn at least a 3 college credit and or advanced placement you should check with your school guidance office about specific college requirements studying for your ap examination it is never too early to start studying the earlier you begin the more time you will have to sharpen your skills do not procrastinate cramming is not an effective way to study since it does not allow you the time needed to learn the test material it is very important for you to choose the time and place for studying that works best for you some students may set aside a certain number of hours every morning to study while others may choose to study at night before going to sleep other students may study during the day while waiting on a line or even while eating lunch only you can determine when and where your study time will be most effective but be consistent and use your time wisely work out a study routine and stick to it when you take the practice exam s try to make your testing conditions as much like the actual test as possible turn your television and radio off and sit down at a quiet table free from distraction make sure to time yourself complete the practice test s score your test s and thoroughly review the explanations for the questions you answered incorrectly however do not review too much during any one sitting concentrate on one problem area at a time by reviewing the question and explanation and by studying our review s until you are confident that you completely understand the material since you will be allowed to write in your test booklet during the actual exam you may want to write in the margins and spaces of this book when practicing however do not make miscellaneous notes on your answer sheet mark your answers clearly and make sure the answer you have chosen corresponds to the question you are answering keep track of your scores this will enable you to gauge your progress and discover general weaknesses in particular sections you should carefully study the reviews that cover the topics causing you difficulty as this will build your skills in those areas to get the most out of your studying time we recommend that you follow the study schedule it details how you can best budget your time test taking tips although you may be unfamiliar with tests such as the advanced placement exams there are many ways to acquaint

yourself with this type of examination and help alleviate your test taking anxieties listed below are ways to help yourself become accustomed to the ap exam some of which may also be applied to other standardized tests become comfortable with the format of the ap examination in statistics when you are practicing to take the exam s simulate the conditions under which you will be taking the actual test s you should practice under the same time constraints as well stay calm and pace yourself after simulating the test only a couple of times you will boost your chances of doing well and you will be able to sit down for the actual test much more confidently know the directions and format for each section of the exam familiarizing yourself with the directions and format of the different test sections will not only save you time but will also ensure that you are familiar enough with the ap exam to avoid anxiety and the mistakes caused by being anxious work on the easier questions first if you find yourself working too long on one question make a mark next to it in your test booklet and continue after you have answered all of the questions that you can go back to the ones you have skipped use the process of elimination when you are unsure of an answer if you can eliminate three of the answer choices you have given yourself a fifty fifty chance of getting the item correct since there will only be two choices left from which to make a guess if you cannot eliminate at least three of the answer choices you may choose not to guess as you will be penalized one quarter of a point for every incorrect answer questions not answered will not be counted be sure that you are marking your answer in the oval that corresponds with the correct item in the test booklet since the multiple choice section is graded by machine marking the wrong answer will throw off your score

the chapters in thinking with data are based on presentations given at the 33rd carnegie symposium on cognition the symposium was motivated by the confluence of three emerging trends 1 the increasing need for people to think effectively with data at work at school and in everyday life 2 the expanding technologies available to support people as they think with data and 3 the growing scientific interest in understanding how people think with data what is thinking with data it is the set of cognitive processes used to identify integrate and communicate the information present in complex numerical categorical and graphical data this book offers a multidisciplinary presentation of recent research on the topic contributors represent a variety of disciplines cognitive and developmental psychology math science and statistics education and decision science the methods applied in various chapters similarly reflect a scientific diversity including qualitative and quantitative analysis experimentation and classroom observation computational modeling and neuroimaging throughout the book research results are presented in a way that connects with both learning theory and instructional application the book is organized in three sections part i focuses on the concepts of uncertainty and variation and on how people understand these ideas in a variety of contexts part ii focuses on how people work with data to understand its structure and draw conclusions from data either in terms of formal statistical analyses or informal assessments of evidence part iii focuses on how people learn from data and how they use data to make decisions in daily and professional life

Plato's Theory of Recollection: A Journey into Innate Knowledge

Plato's theory of recollection, also known as anamnesis, is a cornerstone of his epistemology, his theory of knowledge. It posits that all learning is essentially a process of remembering what our souls already knew before birth. Instead of acquiring knowledge from sensory experience alone, as the Empiricists argued, Plato believed that true knowledge resides within us, waiting to be awakened. This theory, primarily explored in his dialogues Meno and Phaedo, profoundly impacts our understanding of learning, truth, and the nature of the soul. This article will delve into the key aspects of Plato's theory of recollection, exploring its foundations, supporting arguments, and implications.

The Basis of Recollection: The Pre-existence of the Soul

Central to Plato's theory is the belief in the soul's immortality and pre-existence. He argues that our souls existed before our physical birth, inhabiting a realm of Forms – perfect, eternal archetypes of everything we experience in the sensible world. In this realm, the soul had direct access to these Forms, possessing perfect knowledge of concepts like beauty, justice, goodness, and equality. However, the process of birth and embodiment into the physical world resulted in a kind of "forgetting" – a veil drawn over this innate knowledge. Learning, for Plato, is the process of lifting this veil, of recollecting what we already intrinsically know.

The Meno Paradox and its Resolution

Plato cleverly addresses the seemingly paradoxical nature of learning in his dialogue Meno. Socrates, Plato's mouthpiece, poses the question: how can we search for something we don't know? If we know it, we don't need to search, and if we don't know it, we wouldn't know what to search for. The theory of recollection offers a solution: we don't search for knowledge in a completely blank state. Instead, we possess an innate understanding that guides our inquiry, prompting us to recognize truth when we encounter it. The famous example in Meno involves Socrates questioning an uneducated slave boy about geometric problems. Through a series of carefully guided questions, Socrates leads the boy to deduce complex geometrical relationships, demonstrating that

the boy, despite lacking formal education, possesses an inherent understanding of these principles. This illustrates how appropriate questioning can help us "recollect" what we already know.

The Role of Dialectic in Recollection

Plato viewed dialectic, a method of philosophical inquiry through question and answer, as a crucial tool for recollection. Through rigorous questioning and reasoned discussion, the dialectic process helps to clear away the obstacles that obscure our innate knowledge. It's not simply a process of acquiring new information; rather, it's a process of uncovering and clarifying what we already possess implicitly. By prompting critical self-reflection and challenging assumptions, the dialectic helps us to access and articulate our inherent understanding.

The Forms and Their Connection to Recollection

The theory of recollection is inextricably linked to Plato's theory of Forms. The Forms are perfect, unchanging, and eternal archetypes of the things we encounter in the sensory world. A beautiful flower, for example, participates in the Form of Beauty; it's a less-than-perfect reflection of the perfect Beauty itself. Our soul, having encountered the Forms before birth, retains a memory of their perfection, and encountering their imperfect earthly manifestations triggers a recognition, a recollection of the true Form.

Objections and Criticisms of Recollection

Plato's theory, despite its elegance, has faced criticism. Some argue that the theory relies on unverifiable claims about the soul's pre-existence and the realm of Forms. Skeptics question how we can account for significant differences in intellectual capacity between individuals if all knowledge is innate. Furthermore, the theory struggles to explain how new knowledge can be genuinely acquired if all learning is simply remembering. It does not sufficiently account for how scientific discoveries are made, as these seem to derive from observation and experimentation rather than recollection of pre-existing knowledge.

Summary

Plato's theory of recollection is a significant contribution to epistemology. It challenges the purely empirical view of knowledge acquisition, arguing instead that learning is a process of remembering innate knowledge residing within the soul. Through the dialectic process and our encounters with imperfect earthly manifestations of the Forms, we gradually recollect this inherent wisdom. While the theory has its critics, its enduring influence on philosophy highlights its enduring power and intellectual appeal, shaping the understanding of learning and the nature of knowledge for centuries.

FAQs

1. How does Plato's theory of recollection differ from Empiricism? Empiricism emphasizes knowledge gained through sensory experience, while Plato's theory asserts that knowledge is innate and recollection is the process of accessing it. 2. What role does the Theory of Forms play in the theory of recollection? The Forms serve as the source of the knowledge our souls possessed before birth. Recollection is triggered by encountering imperfect reflections of these Forms in the physical world. 3. What is the significance of the slave boy example in Meno? This example demonstrates that even an uneducated individual can access innate knowledge through appropriate questioning, supporting the claim that knowledge is not solely acquired through sensory experience. 4. What are some criticisms of Plato's theory of recollection? Critics question the verifiability of pre-existence and the Forms, and the theory's difficulty in explaining differences in intellectual ability and the acquisition of genuinely new knowledge. 5. How does the theory of recollection influence modern education? While not directly applied, the emphasis on prompting critical thinking, guided inquiry, and facilitating self-discovery reflects aspects of the theory in modern pedagogical approaches.
