architects and artists have always acknowledged over the centuries that rome is rightly called the eternal city rome is eternal above all because it was always young always in its prime here the buildings that defined the west appeared over more than 2000 years here the history of european architecture was written the foundations were laid even in ancient roman times when the first attempts were made to design interiors and thus make space open to experience as something physical and at that time the roman architects also started to develop building types that are still valid today thus creating the cornerstone of later western architecture in it rome s primacy remained unbroken whether it was with old st peter s as the first medieval basilica or new st peter s as the building in which bramante and michelangelo developed the high renaissance or with works by bernini and borromini whose rich and lucid spatial forms were to shape baroque as far as vienna bohemia and lower franconia and also with modern buildings of which there are many unexpected pearls to be found in rome all this is comprehensible only if it is presented historically i e in chronological sequence and so the guide has not been arranged topographically as usual but chronologically this means that one is not led in random sequence from a baroque building to an ancient or a modern one but the historical development is followed successively every epoch is preceded by an introduction that identifies its key features this produces a continuous lavishly illustrated history of the architecture of rome and thus at the same time of the whole of the west practical handling is guaranteed by an alphabetical index and detailed maps whose information does not just immediately illustrate the historical picture but also makes it possible to choose a personal route through history

the architecture of survival setting and politics in apocalypse films offers a compelling exploration of how popular films and tv series from the past two decades use architectural spaces to comment on socio political issues the authors harness varied theoretical perspectives to demonstrate how through set design these works suggest

that certain kinds of architecture support human development community and freedom while other kinds separate us from our fellow humans and make democratic politics impossible the clean lines of modernist design serve in films such as contagion and ex machina as a metaphor for the sanitized sterile politics that drive disaster in the walking dead apocalypse survivors favor traditional architectural styles when rebuilding society a choice that symbolically affirms their democratic principles the massive walls and super gentrification as seen in elysium and army of the dead divide humanity with those on one side wielding illegitimate power empty streetscapes intensify loneliness alienation and the destruction of civil norms smart cities offering a blend of high tech surveillance and big data erode social capital and community in her and transcendence the book concludes with a somewhat hopeful glimpse into architecture s potential to mitigate the catastrophic adverse effects of climate change as seen in films like zootopia

the main complex of the america s stonehenge site in new hampshire is a collection of stone chambers enclosures niches standing stones carved drains basins and astronomical alignments the archaeological community has largely dismissed this seemly eclectic collection of structures as the work of an eccentric farmer named jonathan pattee who built his house on top of the ruins in the 19th century other researchers have sought to compare the chambers and astronomical alignments to stone structures from around the world built by other ancient peoples no one has thought to evaluate the site on its own merits specifically evaluating its architecture architecture can tell you a lot about a culture using this approach the author unravels the mystery surrounding the site this architectural study revealed the site was built in a series of distinct phases each with its own unique style while at the same time incorporating key concepts and ideas from previous phases there is a clear evolution of building skills and cultural ideas that can be followed through the architectural build out of the site because key features and ideas were carried forward from one phase to the next we now know that the site was the work of a single culture over a several thousand year period stone tools and pottery recovered from archaeological excavations at the site confirm that the builders were native americans the idea of native americans building stone structures for ceremonial and spiritual purposes has gained a lot of credibility over the past twenty five years there is mounting evidence that hundreds of ceremonial stone landscapes csl with stone cairns niches enclosures standings stones chambers and astronomical alignments found throughout northeastern united states are part of a broad based native american cultural tradition the america s stonehenge site is

one of the most sophisticated and culturally complex of these sacred ceremonial places the second part of this book uses primary source materials like deeds town records court cases and genealogy to reconstruct the history of the pattee family who owned the hill where the site is found from 1739 through 1863 the pattees started out in the 1700s as a prosperous family with a house in north salem village and a 248 acre farm by the 1820s the third generation was reduced to owning 15 acres of the original farm and living in a small house built on top of the ruins of the site despite his many financial misfortunes jonathan pattee third generation managed to hold on to and protect the site

the architecture of ruins designs on the past present and future identifies an alternative and significant history of architecture from the sixteenth century to the twenty first century in which a building is designed occupied and imagined as a ruin this design practice conceives a monument and a ruin as creative interdependent and simultaneous themes within a single building dialectic addressing temporal and environmental questions in poetic psychological and practical terms and stimulating questions of personal and national identity nature and culture weather and climate permanence and impermanence and life and death conceiving a building as a dialogue between a monument and a ruin intensifies the already blurred relations between the unfinished and the ruined and envisages the past the present and the future in a single architecture structured around a collection of biographies this book conceives a monument and a ruin as metaphors for a life and means to negotiate between a self and a society emphasising the interconnections between designers and the particular ways in which later architects learned from earlier ones the chapters investigate an evolving interdisciplinary design practice to show the relevance of historical understanding to design like a history a design is a reinterpretation of the past that is meaningful to the present equally a design is equivalent to a fiction convincing users to suspend disbelief we expect a history or a novel to be written in words but they can also be delineated in drawing cast in concrete or seeded in soil the architect is a physical novelist as well as a physical historian like building sites ruins are full of potential in revealing not only what is lost but also what is incomplete a ruin suggests the future as well as the past as a stimulus to the imagination a ruin s incomplete and broken forms expand architecture s allegorical and metaphorical capacity indicating that a building can remain unfinished literally and in the imagination focusing attention on the creativity of users as well as architects emphasising the symbiotic relations between nature and culture a building designed occupied and imagined as a ruin acknowledges the coproduction of multiple authors whether human non human or atmospheric and is an appropriate model for architecture in an era of increasing climate change

Decoding the Conversion: 72 Inches to Centimeters and Beyond

The ability to seamlessly convert between different units of measurement is crucial in various fields, from everyday life to specialized professions. Whether you're working on a DIY project, designing a garment, or simply understanding specifications in a global context, accurate unit conversions are essential. This article focuses on a common conversion: transforming 72 inches into centimeters. While seemingly straightforward, this simple conversion reveals important concepts about unit conversion and highlights potential pitfalls to avoid. We'll explore the process step-by-step, address common challenges, and delve into related conversions to provide a comprehensive understanding.

Understanding the Metric and Imperial Systems

Before diving into the conversion, it's beneficial to understand the underlying systems involved. We are dealing with the imperial system (inches) and the metric system (centimeters). The imperial system, prevalent in the United States, uses inches, feet, yards, and miles, while the metric system, used globally, is based on meters, centimeters, millimeters, and kilometers. The key difference is that the metric system uses a base-10 system, making conversions relatively easier than the complex relationships within the imperial system.

The Conversion Factor: Inches to Centimeters

The fundamental relationship between inches and centimeters is defined by the conversion factor: 1 inch = 2.54 centimeters. This factor is consistently used for all inch-to-centimeter conversions. This means that for every one inch, there are 2.54 centimeters. Understanding this fundamental relationship is the cornerstone of accurate conversion.

Converting 72 Inches to Centimeters: A Step-by-Step Approach

Now, let's convert 72 inches to centimeters using the established conversion factor. Step 1: Identify the conversion factor. As we know, 1 inch = 2.54 centimeters. Step 2: Set up the conversion equation. We can set this up as a simple multiplication: 72 inches 2.54 centimeters/inch Step 3: Perform the calculation. Multiply 72 by 2.54: 72 2.54 = 182.88 centimeters Therefore, 72 inches is equal to 182.88 centimeters.

Common Challenges and Pitfalls

While the conversion itself is simple, several common issues can lead to errors: Incorrect Conversion Factor: Using an incorrect conversion factor is the most prevalent mistake. Always double-check that you're using 2.54 centimeters per inch. Unit Mismatch: Ensure your units are consistent throughout the calculation. Mixing inches and feet, for example, will lead to inaccurate results. Calculation Errors: Simple mathematical errors can easily occur. Using a calculator and double-checking your work is crucial for accuracy. Rounding Errors: Depending on the context, rounding to a specific number of decimal places might be necessary. However, excessive rounding can introduce inaccuracies, especially in precise applications.

Expanding the Conversion: Feet, Yards, and Meters

Often, you might need to convert from feet or yards to centimeters, or even to meters. Here's how to approach these related conversions: Feet to Centimeters: First, convert feet to inches (1 foot = 12 inches), then use the inch-to-centimeter conversion factor. Yards to Centimeters: First, convert yards to inches (1 yard = 36 inches), then use the inch-to-centimeter conversion factor. Inches to Meters: After converting inches to centimeters, divide the result by 100 (since 1 meter = 100 centimeters). For example, to convert 6 feet to centimeters: 1. 6 feet 12 inches/foot = 72 inches 2. 72 inches 2.54 centimeters/inch = 182.88 centimeters

Summary

Converting 72 inches to centimeters is a straightforward process, relying on the fundamental conversion factor of 1 inch = 2.54 centimeters. Understanding this factor, along with the potential pitfalls, ensures accurate conversions. Extending this knowledge allows for conversions involving feet, yards, and meters, providing a comprehensive toolkit for various applications. Remember to always double-check your work and use a calculator to minimize errors.
