since the publications of e yablonovitch and s john in 1987 on the optical properties of three dimensional periodic structures the interest on photonic crystals has increased rapidly mainly driven by progress in their theoretical description on the experimental side the fabrication of photonic crystals still remains a major challenge since the fabrication methods either lack quality flexibility or resolution subject of this thesis is the development of a new technique for the generation of threedimensional structures on the sub micrometer scale that is suitable for the fabrication of photonic crystals the crystals fabricated using this technique are characterized and their optical properties are discussed if near infrared femtosecond laser pulses are tightly focused into the volume of a transparent photosensitive resin two photon absorption within the focal volume leads to photopolymerization by moving the laser focus three dimensionally through the volume of the resin any 3d structure can be fabricated by means of two photon polymerization after the polymerization process the non irradiated polymer can be etched away with special solvents leaving the solid 3d structure that was exposed by the focused femtosecond pulses due to the threshold behavior of the two photon

polymerization process one can overcome the diffraction limit by choosing the applied peak laser fluence just slightly above the threshold for polymerization in this case only the central part of the laser focus contributes to the polymerization process it is shown that complicated 3d structures with a resolution as small as 100 nm can be fabricated by means of two photon polymerization using a laser wavelength of 1 780 nm woodpile structures having a face centered cubic symmetry and a photonic bandgap in the near infrared were fabricated with two photon polymerization and were optically characterized by means of fourier transform infrared spectroscopy since the refractive index contrast in polymeric crystals is not high enough to provide a complete photonic bandgap the fabricated woodpile structures were used as templates for the infiltration with highly refractive tio2 and subsequent calcination of the polymer for the first time tio2 replica of near infrared woodpile structures are shown by adapting available algorithms developed for rapid prototyping techniques to the needs of two photon polymerization arbitrary 3d structures could be transferred from a computer generated model to the real world with feature sizes far below the used laser wavelength for the first time optically high quality organic inorganic hybrid polymers ormocers have been used for the fabrication of 3d microstructures by means of two photon polymerization

Hirohito and Pearl Harbor: A Deeper Dive into Japan's Decision

The morning of December 7th, 1941, irrevocably altered the course of world history. The surprise attack on Pearl Harbor, a seemingly brazen act of aggression, continues to fascinate and frustrate historians. Central to understanding this pivotal event is the role of Emperor Hirohito, the reigning monarch of Japan at the time. Was he a puppet, a figurehead manipulated by his military, or a willing participant in the catastrophic decision to attack the US naval base? Unraveling the Emperor's involvement requires a careful examination of the political landscape, the military's ambitions, and the complex nature of the Japanese imperial system.

1. The Imperial System: A Complex Web of Power Understanding Hirohito's role necessitates understanding the unique nature of the Japanese imperial system. Unlike constitutional monarchs in Europe, the Emperor in Japan held a position that blended divine authority with political influence. The Emperor was considered a living god, a descendant of Amaterasu, the sun goddess. This divine status imbued his pronouncements with immense weight, even if the practical exercise of power rested largely with the military and government. This divine aura, however, didn't necessarily translate to direct control over policy decisions. The Imperial Rescript, a formal decree from the Emperor, was the highest form of authority. However, the actual drafting and implementation of such rescripts involved a complex interplay of advisors, military leaders, and government officials. Hirohito's advisors often presented him with *faits accomplis*, meaning decisions were already made before they reached his desk, leaving him with the choice of accepting or rejecting the completed plan. This structure made pinpointing his exact level of complicity a continuous point of historical debate.

2. The Military's Ascendancy: A Path to War By the 1930s, the Japanese military had increasingly exerted its influence on government policy. Fueled by militaristic ideology, expansionist ambitions, and resource scarcity, the military leadership, often acting independently of civilian control, pursued a course of aggressive expansion in Asia. The invasion of Manchuria in 1931 and the Second Sino-Japanese War (1937-1945) demonstrated the military's capacity to act with minimal restraint from the government. This created a climate where the attack on Pearl Harbor was not merely a possibility, but a seemingly inevitable outcome of their unchecked power. The military presented Hirohito with justifications emphasizing the necessity of preemptive strikes to secure vital resources and neutralize the US Pacific Fleet. These justifications often masked the military's ambitions for regional dominance. This complex dynamic makes assessing Hirohito's understanding of the full extent of the military's plans challenging.

3. The Decision to Attack: A Multi-Layered Process The decision to attack Pearl Harbor wasn't a spontaneous act. It was a culmination of years of escalating tensions, strategic planning, and political maneuvering. While the final decision rested technically with the Imperial Conference, the military had already laid the groundwork, presenting Hirohito with a *fait accompli*. He did have the power to veto the plan, but the potential consequences of defying the powerful military, which might have led to a coup, were significant. Historians suggest Hirohito's silence implied consent, if not enthusiastic support. The attack ultimately carried his official seal, which cemented his responsibility – even if it is unclear

how much control he possessed over the planning stages. The decision ultimately demonstrated the precarious balance between the Emperor's symbolic authority and the military's real power. 4. Post-War Implications and the Emperor's Trial Following Japan's defeat in World War II, the question of Hirohito's culpability became a central issue. The Allied powers, particularly the United States, debated his prosecution as a war criminal. Ultimately, General Douglas MacArthur, the Supreme Commander for the Allied Powers, decided against trying Hirohito, largely due to concerns that a trial could destabilize post-war Japan. This decision was highly controversial and remains debated to this day. His role in the war was largely downplayed in the post-war period, contributing to the complexities surrounding his legacy. 5. A Legacy of Debate: The question of Hirohito's responsibility for Pearl Harbor, and the war more broadly, remains a subject of intense scholarly debate. While some historians view him as a puppet, controlled by his ambitious military, others argue that his silence and implicit approval amounted to complicity. Understanding his role requires careful consideration of the intricate power dynamics within the Japanese imperial system and the ambitions of the militarist faction. His legacy is complex, a blend of divine authority, political ambiguity, and historical consequence. FAQs: 1. Did Hirohito directly order the attack on Pearl Harbor? There is no direct evidence that he directly ordered the attack. However, the final decision was approved under his name, and the evidence suggests he was aware of the planning. 2. Why wasn't Hirohito prosecuted as a war criminal? The decision not to prosecute was primarily a strategic one by the Allied powers. A trial might have destabilized post-war Japan, hindering the reconstruction process. 3. What was the role of the Imperial Conference in the decision-making process? The Imperial Conference was the highest decision-making body, but its effectiveness was often undermined by the influence of the military. Decisions were often presented as *fait accompli*, limiting the Emperor's ability to effectively veto plans. 4. How did the attack on Pearl Harbor change the course of World War II? The attack brought the United States directly into World War II, dramatically shifting the balance of power and ultimately leading to Japan's defeat. 5. What are the primary sources used by historians to understand Hirohito's role? Primary sources include Imperial Rescripts, government documents, military records, and the testimonies of individuals involved in the decision-making process. Secondary sources analyze these documents and offer diverse interpretations of events. In conclusion, the role of Emperor Hirohito in the events leading up to Pearl Harbor remains a complex and contested topic. While he did not directly order the attack, his position within the Japanese imperial system, and his implicit approval of the military's plans, make him an undeniable part of the story. Understanding his role requires a nuanced understanding of the political, social, and military context of pre-war Japan. His legacy continues to serve as a cautionary tale about the dangers of unchecked military ambition and the complexities of political power.
