blueprint 4 continues the theme of blueprint 2 in looking at the opportunities for

using market forces for environmental ends it assesses a range of possible imaginative global bargains which give all parties a self interested incentive to improve the global environment the book begins by reviewing the principle global issues to be addressed and then explains the mechanisms of resource degradation how economic systems fail the operation of trade on the environment and the effects of population growth and consumption patterns it then shows how environmental value can be captured and the basis means and institutions for doing so

the objective of the book is to document best practices in managing the major irrigation canal systems to maximise the benefits to farmers in terms of increase in utilization of irrigation potential created under the major irrigation projects the main emphasis on how best we can manage local canal systems to increase farmers incomes in a sustainable way in a multi stakeholder perspectives which include farmers water users associations irrigation department officials agricultural officers and local non governmental organisations involved in farmers welfare

this book was written to make modem policy analysis methods accessible to policy analysts it can improve policy decisions by combining the best analytical methods with the power of analysts and decisionmakers good judgment and with microcomputer hardware and software

the innovation for agribusiness inovagro project which launched with its first three year phase in 2010 uses a market system development msd approach towards the goal of increasing incomes of men and women small scale farmers in northern mozambique inovagro interventions promote improved agricultural productivity participation in selected high potential value chains and the development of inclusive and sustainable market systems such that impacts are expected to last long beyond the termination of the project this paper presents results from a midline quantitative impact evaluation of the second phase of the inovagro project interventions 2014 2017 in it we use a carefully designed and executed quasi experimental study design to credibly attribute changes in market engagement and welfare of participating farmers to exposure to the inovagro ii

project identifying and testing in what respects the intervention was most successful and what regard it had less impact although inovagro ii projects operate in 11 districts of zamb□zia and cabo delgado provinces this impact evaluation focuses on two districts in zamb□zia province alto mol□cue and molumbo and in terms of value chains focuses on the soybean and pigeon pea high potential value chains while the inovagro ii project interventions focus on these in addition to maize sesame and groundnut a baseline survey was undertaken in 2015 covering the 2014 2015 agricultural season and a midline follow up survey was conducted in 2017 covering the 2016 2017 agricultural season and reaching 1 749 households of the original 1 886 households interviewed in the baseline survey using difference in difference estimation and propensity score matching we find that exposure to the inovagro ii project is associated with an increase in the proportion of households selling soybean and pigeon pea by approximately 5 and 16 respectively significant at the 01 level exposure to the inovagro ii project also results in significantly higher shares of smallholder farmers using improved seed for soybean and pigeon pea an increase of 6 for soybean and 2 for pigeon pea we find that the inovagro ii project is also associated with significant increases in access to agricultural output market information from formal sources 5 and hired labor for farming activities 8 despite the significant impacts on short term outcome variables exposure to the inovagro ii project had limited impact on long term outcome variables such as on rural urban migration as well as engagement in the non farm sector two proxies for assessing potential welfare implications of the project however this finding is not surprising given the impact evaluation covers only two years a short period of time to bring about the long term impacts expected to eventually emanate from an msd project

Decoding the Azure Enterprise Agreement: A Simple Guide

Microsoft Azure, a leading cloud platform, offers various licensing options. For large organizations, the Azure Enterprise Agreement (EA) is often the most cost-effective and flexible choice. This article demystifies the Azure EA, providing a clear understanding of its benefits, structure, and implications.

1. Understanding the Basics: What is an Azure EA?

An Azure Enterprise Agreement is a comprehensive licensing agreement designed for enterprises with significant cloud adoption plans. Instead of individual subscriptions, it provides a single agreement covering multiple Azure services across your entire organization. Think of it as a bulk purchase, offering better pricing and streamlined management compared to paying for individual services a la carte. This agreement gives you the flexibility to scale your cloud resources up or down as needed, without the hassle of constant contract negotiations.

2. Key Benefits of an Azure EA: Why Choose it?

The advantages of an EA extend beyond simple cost savings. Here are some key benefits: Cost Optimization: EAs generally offer significantly lower rates per service compared to pay-as-you-go options. Volume discounts are a core component, meaning the more you spend, the lower your per-unit cost becomes.

Simplified Management: A single agreement simplifies billing and management, consolidating all your Azure spending into one invoice and eliminating the administrative burden of managing numerous individual subscriptions. You can also leverage centralized management tools to track usage and costs across your organization. Flexibility and Scalability: EAs provide the flexibility to adjust your cloud resources as needed. You can easily add or remove users, services, and subscriptions without negotiating new contracts. This makes it ideal for organizations experiencing fluctuating workloads. Enhanced Control and Governance: EAs allow for better control and governance of your Azure environment. You can establish clear spending limits, allocate resources effectively across different departments, and track consumption to ensure optimal resource utilization. Access to Specialized Support: EAs often include access to enhanced support options, providing quicker response times and more specialized assistance when needed.

3. Structure of an Azure EA: Understanding the Components

An Azure EA is structured around several key components: Enrollment: This is the initial agreement establishing your organization's participation in the EA. It defines the overall terms and conditions. Account Owners: Designated individuals within your organization responsible for managing the EA, including billing, access control, and resource allocation. Departments or Accounts: The EA can be further structured into different departments or accounts within your organization, providing better cost allocation and tracking. Subscriptions: Within each department or account, individual subscriptions are created to access specific Azure services. These subscriptions are the operational units for using Azure resources. Charges and Billing: Billing is typically consolidated into a single monthly invoice, providing a clear overview of your Azure spending.

4. Practical Examples: Seeing the EA in Action

Example 1: Imagine a large corporation with multiple departments □ Marketing, Sales, and IT. An EA allows each department to have its own subscription, using Azure resources independently, while still benefiting from consolidated billing and management. Marketing might use Azure for advertising campaigns, Sales for CRM, and IT for infrastructure management. Example 2: A rapidly growing startup anticipates substantial Azure usage. An EA allows them to scale their resources quickly as needed without worrying about contract limitations, ensuring they're not paying unnecessarily high rates for infrequent, short-term resource spikes.

5. Actionable Takeaways and Key Insights

Carefully assess your organization's current and projected Azure usage before committing to an EA. Understand the different pricing models within the EA and choose the one best suited to your needs. Establish clear roles and responsibilities for EA management within your organization. Regularly monitor your Azure spending to ensure optimal cost management. Leverage Azure's cost management tools to optimize your resource usage and identify areas for improvement.

FAQs: Addressing Common Questions

1. What are the minimum spending requirements for an Azure EA? There's no minimum spending requirement, but significant discounts are typically associated with higher spending. 2. Can I switch from pay-as-you-go to an EA? Yes, you can migrate existing pay-as-you-go subscriptions to an EA. 3. How long is the term of an Azure EA? Azure EAs are typically three-year agreements, offering stability and predictable pricing. 4. What happens if my Azure usage exceeds my

projected spending? You can adjust your spending commitments during the agreement period, though significant changes may involve additional processes. 5. What support is available for managing my Azure EA? Microsoft offers comprehensive documentation, online support resources, and dedicated account managers to assist with EA management.
