from de gaulle onwards france s strategic independence has been predicated on self sufficiency in modern weapons to achieve and maintain the requisite defence industrial base in the context of limited domestic orders paris sought to promote the export of its arms during the cold war this underpinned but was also an expression of france s determination to resist bipolar domination france offered customers around the world an alternative to reliance on one superpower or the other and in doing so it generated the revenue to support an extensive domestic arms industry the end of the cold war ushered in fundamental changes however western defence spending shrank and the global market was turned upside down while france s arms export policy was

less affected by human rights concerns than other democracies it was not immune to pressures stemming from the consolidation of europe's defence industrial base and the increased interest of the eu in regulating the arms trade this adelphi book considers how france has responded to changing political and market circumstances in the way that it promotes and controls the export of weapons it examines the rationale for considering a liberal arms export policy as essential to french independence and the institutional arrangements that underpinned this it tracks the dramatic changes in the global arms market since 1990 in terms of demand and market competition and charts the response of the french government to these changes the book underlines how the french machinery of government as a directing force behind the defence industry has been resistant to the notion of export restraint even in the case of sales to authoritarian regimes however it argues that france now faces a dilemma over whether to continue with a long successful course or to moderate its independence through greater collaboration to bolster european integration and better compete globally

georgia is recovering from an adverse external shock a decline in trading partners growth since late 2014 although at a slower pace than previously envisaged the economy has shown resilience to the external shock with real gdp growth averaging 2.8 percent in 2015-16 the highest among its main trading partners except for china and turkey the exchange rate was allowed to adjust and the dollarized banking sector has weathered the significant depreciation vis-à-vis the dollar with depreciation of major trading partner currencies external competitiveness has not improved however hence external imbalances remain elevated and reserves below adequate levels following the october 2016 parliamentary elections that gave the ruling party a constitutional majority the new government has united around a policy agenda centered on bolstering growth

gifted education has come to be regarded as a key national programme in many countries and gifted education in science disciplines is now being recognised to be of major importance for economic and technological development despite these initiatives and developments internationally there are very few discussions on gifted education in science drawing upon practices and experiences in different national contexts in support of an international dialogue between researchers and practitioners often working within isolated traditions this book offers information on key influential approaches to science education for gifted learners and surveys current policy and practice from a diverse range of educational contexts the volume offers an informative introduction for those new to studying gifted science education as well as supporting the development of the field by offering examples of critical thinking about key issues and accounts of the influences at work within education systems and the practical complexities of providing science education for the gifted the contributions draw upon a variety of research approaches to offer insights into the constraints and affordances of working within particular policy contexts and the strengths and challenges inherent in different approaches to practice chapters include teaching science to the gifted in english state schools locating a compromised gifted talented policy within its systemic context models of education for science talented adolescents in the united states past present and likely future trends navigating the shifting terrain between policy and practice for gifted learners in tanzania science education for female indigenous gifted students in the mexican context gifted science education in

the greater east asia co prosperity sphere offers a lucid dynamic and highly readable history of japan s attempt to usher in a new order in asia during world war ii cross currents east asian history and culture review in the greater east asia co prosperity sphere jeremy a yellen exposes the history politics and intrigue that characterized the era when japan s total empire met the total war of world war ii he illuminates the ways in which the imperial center and its individual colonies understood the concept of the sphere offering two sometimes competing sometimes complementary and always intertwined visions one from japan the other from burma and the philippines yellen argues that from 1940 to 1945 the greater east asia co prosperity sphere epitomized two concurrent wars for asia s future the first was for a new type of empire in asia and the second was a political war waged by nationalist elites in the colonial capitals of rangoon and manila exploring japanese visions for international order in the face of an ever changing geopolitical situation the greater east asia co prosperity sphere explores wartime japan s desire to shape and control its imperial future while its colonies attempted to do the same at japan s zenith as an imperial power the sphere represented a plan for regional domination by the end of the war it had been recast as the epitome of cooperative internationalism in the end the sphere could not survive wartime defeat and yellen s lucidly written account reveals much about the desires of japan as an imperial and colonial power as well as the ways in which the subdued colonies in burma and the philippines jockeyed for agency and a say in the future of the region

climate migration as an image of people moving due to sea level rise and increased drought has been presented as one of the main security risks of global warming the rationale is that climate change will cause mass movements of climate refugees causing tensions and even violent conflict through the lens of climate change politics and securitisation theory ingrid boas examines how and why climate migration has been presented in terms of security and reviews the political consequences of such framing exercises this study is done through a macro micro analysis and concentrates on the period of the early 2000s until the end of september 2014 the macro level analysis provides an overview of the coalitions of states that favour or oppose security framings on climate migration it shows how european states and the small island states have been key actors to present climate migration as a matter of security while the emerging developing countries have actively opposed such a framing the book argues that much of the division between these states alliances can be traced back to climate change politics as a next step the book delves into uk india interactions to provide an in depth analysis of these security framings and their connection with climate change politics this micro level analysis demonstrates how the uk has strategically used security framings on climate migration to persuade india to commit to binding targets to reduce their greenhouse gas emissions the book examines how and why such a strategy has emerged and most importantly to what extent it has been successful climate migration and security is the first book of its kind to examine the strategic usage of security arguments on climate migration as a political tool in climate change politics original theoretical empirical and policy related insights will provide students scholars and policy makers with the necessary tools to review the effectiveness of these framing strategies for the purpose of climate change diplomacy

and delve into the wider implications of these framing strategies for the governance of climate change

the last two years have witnessed deterioration in the global security situation characterised by increasing tensions among major powers the threat perceptions of the us china and russia vis à vis each other have sharpened there is stiff competition among them to dominate the strategic space in different parts of the world this has led them to formulate national security strategies which are more assertive aggressive and competitive there is lack of consensus in resolution of conflicts in afghanistan and syria there is no concerted effort in meeting the challenge of the islamic state it is in this fractured security environment that india has been making special efforts to project itself as a leading power commensurate with its economic and military potential this fifteenth volume of india s national security annual review undertakes an incisive analysis of india s endeavours to maximise its gains with respect to its strategic partners the volume also focuses on the new dynamism that india has injected in its relations with countries in the middle east and the asia pacific india s threat perceptions in its extended security zone critical aspects of its strategic preparedness and complex issues regarding its internal security have been thoroughly examined with contributions from experts from the fields of diplomacy academia and civil and military services the book will be one of the most dependable sources of analyses for scholars of international relations foreign policy defence and strategic studies and political science and practitioners alike

Decoding Weight: Understanding 92kg in Stone

Weight conversion can be confusing, especially when dealing with less common units like stones. This article will break down the process of converting 92 kilograms (kg) into stones (st), explaining the conversion factor and offering practical examples. Understanding this conversion is beneficial for anyone who frequently interacts with different weight systems, whether for personal health tracking, international trade, or simply comparing measurements.

Understanding Kilograms and Stones

Before we dive into the conversion, let's define our units: Kilograms (kg): This is the standard unit of mass in the International System of Units (SI), widely used globally. One kilogram is approximately equal to the mass of one liter of water. Stones (st): This is an Imperial unit of mass, primarily used in the United Kingdom and some Commonwealth countries. One stone is equal to 14 pounds (lbs). It's less commonly used internationally compared to kilograms.

The Conversion Factor: Kilograms to Stones

The key to converting 92kg to stones lies in understanding the relationship between kilograms and pounds, and then pounds and stones. The conversion factors are: 1 kilogram (kg) \approx 2.20462 pounds (lbs) 1 stone (st) = 14 pounds (lbs) Therefore, to convert kilograms to stones, we first convert kilograms to pounds, then pounds to stones.

Calculating 92kg in Stones: A Step-by-Step Guide

1. Kilograms to Pounds: Multiply the weight in kilograms by the conversion factor: 92 kg \times 2.20462 lbs/kg \approx 202.82 lbs 2. Pounds to Stones: Divide the weight in pounds by the number of pounds in a stone: 202.82 lbs / 14 lbs/st \approx 14.49 st Therefore, 92kg is approximately equal to 14.49 stones. We can round this to 14.5 stones for practical purposes.

Practical Examples: Putting it into Context

Imagine you're buying a large animal feed bag. The label indicates the weight as 92kg. Understanding that this is roughly 14.5 stones can help you better visualize the size and weight of the bag compared to other items you've purchased before. Similarly, if

you're monitoring your weight and see a reading of 92kg on a digital scale, knowing the equivalent in stones allows for easier comparison with weight charts or records that might use the stone unit.

Beyond the Calculation: Understanding Weight Variation

It's important to remember that weight can fluctuate based on factors like hydration and food intake. A small change in weight, represented in kilograms or stones, might not reflect a significant change in body composition. Always consider these factors when monitoring your weight or comparing weights of different objects.

Actionable Takeaways and Key Insights

Understanding the conversion between kilograms and stones is useful for navigating different weight systems. The conversion process involves two steps: kilograms to pounds, then pounds to stones. Remember the key conversion factors: 1 kg \approx 2.20462 lbs and 1 st = 14 lbs. Be aware that weight can fluctuate; focus on trends rather than minute daily changes. Utilize online converters for quick and easy calculations.

Frequently Asked Questions (FAQs)

1. Is there a single formula to convert kg to stones directly? While not a single formula, you can combine the conversion factors into one: Weight in stones \approx (Weight in kg 2.20462) / 14 2. Why are stones still used? Stones are a legacy unit, historically ingrained in certain cultures and industries. While kilograms are the standard internationally, stones persist in specific regions and contexts. 3. What's the difference between mass and weight? Mass is the amount of matter in an object, while weight is the force of gravity acting on that mass. While often used interchangeably in everyday conversation, the distinction is important in scientific contexts. 4. Are online converters accurate? Most reputable online converters provide accurate results, but always double-check the calculations, particularly if dealing with critical applications. 5. Can I convert stones to kilograms using a similar method? Yes, simply reverse the process: multiply the weight in stones by 14 to get pounds, then divide by 2.20462 to get kilograms.
