the israeli palestinian question has been at the heart of middle eastern politics for the last 80 years although the palestinian land has been one of the main subjects of international politics since the beginning of the 20th century it was the unusual creation of the israeli state in 1948 that led to many regional crises since then the israeli state has been the instigator of many regional wars continuous expansionism discrimination and violation of international law and basic human rights millions of palestinians were forced to leave their country and those who preferred to stay were deprived of their rights a special type of apartheid has been implemented by the israeli state all regional states and most global powers have been involved with this problem which is not only between the aggressive israeli nationalism and the defensive palestinian nationalism but also a conflict between the israeli state and the arab countries a civilizational dispute between a pro israeli coalition and muslim countries and a war that symbolizes the struggle between the oppressor and the oppressed a number of international organizations have passed different resolutions offering solutions to the problem among them is the islamic cooperation organization which was established following the many attacks against sacred places notably the city of al quds and al aqsa mosque in palestine the international community represented by the united nations un has been calling on the israeli state for decades to withdraw from the occupied palestinian territories and to abide by the international rules and principles as the un resolutions international law and international public opinion expect and palestinians also aspire for israel must withdraw from the occupied territories namely east jerusalem the west bank and the gaza strip and recognize an independent palestinian state as part of a two state solution however global powers especially the united states have not allowed the un to force the israeli state to move out from the occupied territories and to restore peace in the region in other words the palestinian people and muslim nations have long witnessed the continuous israeli fait accompli the never ending palestinian suffering the weakness of the muslim middle eastern countries and the indifference of the global powers israel continues to violate not only the rights of self determination but also basic human rights for palestinians as one of the indications of this inhumane policy the gaza strip has been under continuous israeli blockade and attacks since 2006 israel has been attacking the gaza strip and the west bank intermittently to expand its territories in order to establish new illegal jewish settlements and squash any hope for palestinian statehood israel s large scale attacks against the gaza strip in 2008 2012 2014 2018 and

2019 have made conditions in palestine unlivable the latest attack in 2019 stopped with yet another cease fire however the fate of the most recent cease fire is not different from the previous ones israel has never fulfilled its promises and cynically considers the cease fire as a temporary process allowing time to prepare for a new wave of violence at a time when there is no will or strength in the arab world to resist against any anti palestinian and anti arab development the current israeli and u s government is trying to legalize the years of israeli atrocities crimes against humanity and violations of human rights most steps taken by these two governments contradict with and violate international norms and rules first the israeli parliament adopted a law that is known as the basic law or the nation state act in 2018 according to this law the right to exercise national self determination in the state of israel is unique to the jewish people and thereby it denies palestinian people any national rights or existence second u s president donald trump s unilateral recognition of the united jerusalem as the capital of israel and the transfer of the u s embassy from tel aviv to jerusalem is a pivotal point in the history of the middle east for both regional and global actors this decision with significant implications for the middle eastern politics is not only about the transfer of the israeli capital from tel aviv to jerusalem but also about the halt of the middle eastern peace process furthermore it implicitly means that the u s supports the expulsion of palestinians from their homeland and the prevention of the establishment of a palestinian state in other words the u s has contradicted its traditional policy and has abandoned the long time advocated two state solution third contrary to basic rules of international law and a number of un resolutions the u s government announced that they do not consider the illegal israeli settlements in the occupied territories as inconsistent with international law the u s also stopped funding the united nations palestinian refugee agency unrwa and closed down the washington d c office of the palestinian liberation organization plo a body internationally recognized as the representative of the palestinian people with all these steps the u s government demonstrated that it fully and unconditionally supports the israeli state fourth trump has declared a so called middle east peace plan in january 28 2020 after meeting with israeli prime minister benjamin netanyahu and opposition leader benny gantz in washington d c the u s government has ignored and violated all decisions made and resolutions passed by the un regarding the issue according to which the israeli state is an occupier of the palestinian land and violator of international rules and norms bearing in mind all these illegal steps it can be said that the u s shares the responsibility with israel for the violation of palestinian rights achieving peace between the israeli state and the palestinian people appears to be unachievable because the israeli side does not take any palestinian demands

into consideration all steps taken so far have been unilateral and against the interests of the palestinians the deal of the century is no exception it is also a unilateral intervention to the question effectively it is a dictation to the palestinian israeli problem which ignores the realities on the ground the timing of the deal of the century has to do with the current situation in the arab world as a matter of fact today there is no political arab world since almost all heavyweight nationalist arab states are in chaos politically unstable or vulnerable the united arab emirates and saudi arabia who claim the leadership of the arab world are closely associated with the trump administration and the israeli state these two arab states and the current egyptian government support israel rather than the palestinians and blame palestinian political groups instead of the israeli state for the ongoing situation these states condemn the retaliatory actions conducted by the palestinians and remain silent about the inhumane treatment they suffer at the hands of the israeli war machine consequently there is no strong arab state to defend the rights of palestinians for decades arab regimes have exploited the issue for domestic political legitimacy arab regimes who were afraid of their peoples tried to satisfy their demands by exaggerating the israeli threat nowadays it appears that their fear of external powers is greater which is why they capitulate to the demands of countries such as israel and the u s and accordingly use the palestinian issue in negotiations to their own benefit however trump s proclamation of the deal of the century caused fierce reaction from public opinion worldwide especially from the arab streets and muslim communities the trump administration miscalculated the civilian reaction this time it will be difficult to convince the arab public since it is much more aware than before about their regimes foreign policy behavior trump s declaration which contributed to the reunification of the arab and muslim peoples satisfies only radical christians and zionist jews as long as the blockade on the palestinian lands continues the region will be subject to new waves of violence considering the unstable international system ultra nationalist and xenophobic western politics chaotic regional atmosphere and israeli domestic politics it is not expected that the israeli government will ease the blockade and give some rights to the palestinians global powers such as the u s and the european union not only close their eyes to the israeli atrocities but also support its unequal and limitless violence even the un has begun to warn the two sides about the escalation of violence thus undervaluing the israeli brutality by equating it with the small retaliatory actions of the palestinians therefore it can be said that there is currently no deterrent power in the world that is preventing israeli aggression only a significant change in the regional and global balance of power will bring considerable changes in israeli policies towards the region this new issue of insight turkey highlights different subjects

regarding the israeli palestinian issue some of the leading and well known intellectuals and academicians from palestine israel turkey europe and the united states contributed to this issue focusing of different dimensions of the problem from a religious perspective more particularly in islam the status and significance of bayt al maqdis the city of al quds which is one of the main themes of the problem must be acknowledged ikrima saeed sabri's commentary explains the significance of bayt al maqdis by addressing the close bonds namely the bonds of creed worship civilization and culture and history which are firm ties that link muslims to bayt al maqdis and the land of palestine the resolution of the israeli palestinian conflict has faced many different obstacles since the united nations resolved to partition palestine into two separate states jewish and arab galilee golan addresses these obstacles between israel and palestine as well as possibilities for peace primarily the pragmatic 1988 plo decision to create a new state next to the state of israel in the west bank and gaza with a capital in east jerusalem she discusses the possibilities of achieving a political peaceful co existence in palestine and finds it quite challenging the commentary written by victor kattan examines the legality of the israeli settlements and occupations in the west bank based on the perspective of international law and u s foreign policy he analyzes the motives of the international criminal court icc decision to initiate an investigation into the alleged war crimes committed in palestine by the israeli state which include israel's settlement activities in the west bank and east jerusalem is the two state solution to the israeli palestinian conflict achievable is the question that ian lustic seeks to answer in his opinion this solution is a pretty picture of the future that only good people can imagine meanwhile it remains just that a picture because there is a lack of effort to conduct negotiations between the israeli state and the palestinian people this lack of effort is mainly related to the nature of negotiations which have become highly provocative in recent years the influx of immigrant jewish communities from different countries to israel has disenfranchised the palestinians from their land although israel claims that it offers democratic rights for all its citizens in reality palestinians have nothing ran greenstein conceptualizes this situation by comparing the israeli policies with the practice of apartheid in south africa he identifies the policies practiced by israel as apartheid of a special type and a crime against humanity to reveal how the status of the original palestinian population has been ignored elia zureik highlights the israeli practices of governance in palestine and how the zionist movement and later the israeli state have worked to kill the dream of the palestinian people for their own state this has been achieved through passing racially biased laws that discriminate against the native population and using violence when enforcing those laws especially after the israeli state

codified its new citizenship law that defines israel as the state of the jewish people ayfer erdoğan and lourdes habash question the continuity of the u s policy making towards the israeli palestinian conflict especially under the trump administration the results show that there hasn t been a radical change throughout the administrations however the u s position in the conflict has become more transparent with a sharper pro israel tilt during the trump administration hamas has a dual role in the political and military struggle against the israeli state on one hand and fatah in palestinian politics on the other although hamas has had many achievements since its establishment in the late 1980s it has also failed in many aspects to understand why nasuh uslu and İbrahim karataş evaluate this dualist struggle of hamas in palestine the authors conclude that since hamas has been otherized by many international actors the palestinian authority pa and some international actors contributed more to this struggle however hamas is still expected to fulfill the needs of palestinians in addition to these eight articles focusing on the israeli palestinian issue there are some insightful pieces on a range of topics regarding turkey and international politics the transformation of international education with a turkey centric perspective strengthens turkey s cultural diplomacy and soft power this transformation is led by different sub governmental and non governmental organizations one of the leading actors is the turkish maarif foundation in their commentary birol akgün and mehmet Özkan contextualize the foundation s foreign and domestic policy and outline a vision through evaluating activities over the past three years the principle of the more corrupt the country the less democratic it is likely to be can be measured in the balkan countries sabrina p ramet in her article addresses problems that the balkan countries are facing such as corruption unemployment and poverty with regard to the events of the gulf crisis farhan mujahid chak deconstructs the reasons and motives behind the quartet s blockade on qatar to do so he employs post colonialism variables assuming that the preponderance of the u s military power in the gulf cooperation council produces competing projects in the middle east he underlines three conflicting ideal types subservient resisting increasing and pivoting from engagement to resisting the american hegemony the article written by nur köprülü takes us back to the events of when the public protests engulfed most arab regimes in 2011 however she focuses on how the democratization processes in the mena region led to the empowerment of the islamist actors after decades of political exclusion hence within a domestic and regional context shaping the politics of islamist parties köprülü explores different trajectories of two countries in the region the inclusion of islamists in the case of tunisia and their exclusion in the case of jordan in the last piece of this issue krizza janica mahinay analyzes the shift of the

moro national liberation movement mnlf in the discourse on malaysia and the ramifications of this new discourse within the philippine state she elaborates this shift through the lens of power relations and foreign policy taking into account the struggle for legitimacy within the philippines through a wide range of commentaries and articles this issue of insight turkey aims to bring to its readers a comprehensive framework on the current situation of the israeli palestinian question whether there will be a deal to this problem remains a difficult question to be answered currently one thing is clear that the plan declared by the trump administration which was welcomed by israel and some of its arab allies such as the united arab emirates and saudi arabia assures the palestinian people the continuation of their century long ordeal

information theory is essentially about correlations and the novel approach of bananaworld is to get at what s counterintuitive about quantum information by considering correlations between normally mundane experiences that every reader can relate to

the abcs of rbc is the first book to provide a basic introduction to real business cycle rbc and new keynesian models these models argue that random shocks new inventions droughts and wars in the case of pure rbc models and monetary and fiscal policy and international investor risk aversion in more open interpretations can trigger booms and recessions and can account for much of observed output volatility george mccandless works through a sequence of these real business cycle and new keynesian dynamic stochastic general equilibrium models in fine detail showing how to solve them and how to add important extensions to the basic model such as money price and wage rigidities financial markets and an open economy the impulse response functions of each new model show how the added feature changes the dynamics the abcs of rbc is designed to teach the economic practitioner or student how to build simple rbc models matlab code for solving many of the models is provided and careful readers should be able to construct solve and use their own models in the tradition of the freshwater economic schools of chicago and minnesota mccandless enhances the methods and sophistication of current macroeconomic modeling

prohibited use of force under article 2 4 of the un charter and customary international law has until now not been clearly defined despite its central importance in the international legal order and for international peace and security this book accordingly offers an original framework to identify prohibited uses of force in areas that are usually less studied such as those that use emerging technology or take place in newer military domains like outer space in doing so erin pobjie explains

the emergence of the customary prohibition and its relationship with article 2 4 and identifies the elements of a prohibited use of force in a major contribution to the scholarship the book proposes a framework that defines a use of force in international law and applies this framework to illustrative case studies to demonstrate its usefulness as a tool for students legal scholars and practitioners

this textbook presents the basics of philosophy that are necessary for the student and researcher in science in order to better understand scientific work the approach is not historical but formative tools for semantical analysis ontology of science epistemology and scientific ethics are presented in a formal and direct way the book has two parts one with the general theory and a second part with application to some problems such as the interpretation of quantum mechanics the nature of mathematics and the ontology of spacetime the book addresses questions such as what is meaning what is truth what are truth criteria in science what is a theory what is a model what is a datum what is information what does it mean to understand something what is space what is time how are these concepts articulated in science what are values what are the limits of science and many more the philosophical views presented are scientific in the sense that they are informed by current science they are relevant for scientific research and the method adopted uses the hypothetical deductive approach that is characteristic of science the results and conclusions as any scientific conclusion are open to revision in the light of future advances hence this philosophical approach opposes to dogmatic philosophy supported by end of chapter summaries and a list of special symbols used the material will be of interest for students and researchers in both science and philosophy the second part will appeal to physicists and mathematicians

can gandhi be considered a systematic thinker while the significance of gandhi s thought and life to our times is undeniable it is widely assumed that he did not serve any discipline and cannot be considered a systematic thinker despite an overwhelming body of scholarship and literature on his life and thought the presuppositions of gandhi s experiments the systematic nature of his intervention in modern political theory and his method have not previously received sustained attention addressing this lacuna the book contends that gandhi s critique of modern civilization the presuppositions of post enlightenment political theory and their epistemological and metaphysical foundations is both comprehensive and systematic gandhi s experiments with truth in the political arena during the indian independence movement are studied from the point of

view of his conscious engagement with method and theory rather than merely as a personal creed spiritual position or moral commitment the author shows how gandhi s experiments are illustrative of his theoretical position and how they form the basis of his opposition to the foundations of modern western political theory and the presuppositions of the modern nation state besides envisioning the foundations of an alternative modernity for india and by its example for the world

the language communication society triangle defies traditional scientific approaches rather it is a phenomenon that calls for an integration of complex transdisciplinary perspectives if we are to make any progress in understanding how it works the highly diverse agents in play are not merely cognitive and or cultural but also emotional and behavioural in their specificity indeed the effort may require building a theoretical and methodological body of knowledge that can effectively convey the characteristic properties of phenomena in human terms new complexity approaches allow us to rethink our limited and mechanistic images of human societies and create more appropriate emo cognitive dynamic and holistic models we have to enter into dialogue with the complexity views coming out of other more material sciences but we also need to take steps in the linguistic and psycho sociological fields towards creating perspectives and concepts better fitted to human characteristics our understanding of complexity is different but not opposed to the one that is more commonly found in texts written by people working in physics or computer science for example the goal of this book is to extend the knowledge of these other more human or socially oriented perspectives on complexity taking account of the language and communication singularities of human agents in society our understanding of complexity is different but not opposed to the one that is more commonly found in texts written by people working in physics or computer science for example the goal of this book is to extend the knowledge of these other more human or socially oriented perspectives on complexity taking account of the language and communication singularities of human agents in society

this title was first published in 2000 politics cannot be conceived of as just a subsystem of society or as a network of particular interests the concept of interests and their role within the normative political debate is given a new interpretation by this book which examines how political interest market mechanisms and rational choice theories exist in the light of

democratic freedom and social justice the book builds on different concepts of procedural justice from schumpeter buchanan and habermas s conceptions of democracy and the role of political compromise and coalition in the idea of consensus as a condition for political legitimation

spectroscopy is an indispensable tool in understanding physical and chemical structure and today very sophisticated spectroscopic instruments are available with modern data processing techniques this book covers the elementary and basic aspects of atomic spectroscopy like bohr s theory and atomic physics up to the latest developments including laser cooling bose einstein condensates and atom lasers spectroscopy plays a major role in every field of science and this book would be

valuable for physicists chemists and biologists

considers the application of modern control engineering on digital computers with a view to improving productivity and product quality easing supervision of industrial processes and reducing energy consumption and pollution the topics covered may be divided into two main subject areas 1 applications of digital control in the chemical and oil industries in water turbines energy and power systems robotics and manufacturing cement metallurgical processes traffic control heating and cooling 2 systems theoretical aspects of digital control adaptive systems control aspects multivariable systems optimization and reliability modelling and identification real time software and languages distributed systems and data networks contains 84 papers

this liber amicorum is published at the occasion of judge lucius caflisch s retirement from a distinguished teaching career at the graduate institute of international studies of geneva where he served as professor of international law for more than three decades and where he has also held the position of director it was written by his colleagues and friends from the european court of human rights from universities all around the world from the swiss foreign affairs ministry and many other national and international institutions the liber amicorum lucius caflisch covers different fields in which judge caflisch has excelled in his various capacities as scholar representative of switzerland in international conferences legal adviser of the swiss foreign affairs ministry counsel registrar arbitrator and judge this collective work is divided into three main sections the first section examines questions concerning human rights and international humanitarian law the second section is devoted to the international law of spaces including matters regarding the law of the sea international waterways antarctica and boundary and territorial issues the third section addresses issues related to the peaceful settlement of disputes both generally and with regard to any particular means of settlement the contributions are in both english and french

computational properties of use to biological organisms or to the construction of computers can emerge as collective properties of systems having a large number of simple equivalent components or neurons the physical meaning of content addressable memory is described by an appropriate phase space flow of the state of a system a model of such a system is given based on aspects of neurobiology but readily adapted to integrated circuits the collective properties of this model

produce a content addressable memory which correctly yields an entire memory from any subpart of sufficient size the algorithm for the time evolution of the state of the system is based on asynchronous parallel processing additional emergent collective properties include some capacity for generalization familiarity recognition categorization error correction and time sequence retention the collective properties are only weakly sensitive to details of the modeling or the failure of individual devices

## **The Shocking Truth About Electric Weakness: Are You at Risk?**

Ever felt that nagging sense of inadequacy when faced with a flickering lightbulb or a sputtering appliance? It's not just you. Many of us secretly harbor a fear, a quiet dread, even a sense of incompetence when it comes to all things electrical. We call it "electric weakness," and while it's not a clinically recognized condition, its impact on our lives – from DIY projects to simple home maintenance – is undeniably real. Let's delve into this often-unacknowledged phenomenon and shed some light (pun intended) on its causes, consequences, and how to overcome it.

## **Understanding the Root of the Problem: Fear vs. Ignorance**

Electric weakness isn't necessarily a fear of electricity itself. It's more accurately described as a combination of fear and lack of knowledge. The inherent danger of electricity is a legitimate concern; a poorly handled electrical issue can lead to serious injury or even death. This inherent risk fuels a sense of apprehension, exacerbated by a lack of understanding of basic electrical principles. Many people avoid dealing with electrical issues because they simply don't know where to begin, perpetuating a cycle of avoidance and "weakness." This is especially true compared to plumbing or carpentry, where visual and tactile understanding might be more intuitive.

## **The High Cost of Avoidance: Safety and Financial Implications**

The consequences of electric weakness extend beyond a simple inability to change a lightbulb. Ignoring electrical problems can lead to serious safety hazards. Faulty wiring can cause fires, malfunctioning appliances can lead to electrocution, and

damaged outlets pose a significant risk to children and pets. Furthermore, avoiding necessary electrical maintenance can result in increased costs in the long run. A small problem ignored can escalate into a major, expensive repair, even requiring complete rewiring in extreme cases. Think of a faulty circuit breaker continually tripping – ignoring it might seem convenient initially, but the underlying problem could damage expensive appliances.

## **Building Confidence: Demystifying Electrical Systems**

Overcoming electric weakness starts with education. Understanding basic electrical concepts isn't rocket science. Learning about voltage, amperage, and grounding isn't about becoming an electrician, but about developing a foundational understanding of how electrical systems work. Simple online courses, YouTube tutorials, and even well-illustrated DIY guides can provide a safe and accessible starting point. Focus on understanding the basics, such as identifying different types of wire, understanding the purpose of circuit breakers, and recognizing signs of faulty wiring (exposed wires, flickering lights, burning smells).

## **Practical Steps to Empower Yourself: Small Wins, Big Impact**

Start small. Replacing a lightbulb, testing an outlet with a non-contact voltage tester, or even just identifying your electrical panel are all small steps that build confidence and familiarity. Each successful task boosts your self-efficacy, reducing anxiety and fostering a sense of accomplishment. Remember to always prioritize safety. If you're unsure about anything, don't hesitate to call a qualified electrician. It's far better to invest in professional help than to risk injury or damage. Gradually, as you tackle simpler tasks successfully, you'll build the confidence to tackle more complex issues.

## Beyond the Basics: Advanced Knowledge and Professional Help

While tackling basic tasks independently is empowering, recognizing your limitations is crucial. Major electrical work, such as rewiring a house or installing new appliances, should always be left to qualified professionals. They possess the expertise, tools, and safety protocols to handle such tasks safely and efficiently. Don't be afraid to admit when you need help; seeking professional assistance isn't a sign of weakness, but a responsible approach to safety. Conclusion: Electric weakness is a common, yet often overlooked, issue. It stems from a combination of fear and a lack of knowledge about basic electrical principles. However, through education, gradual exposure, and the prioritization of safety, this "weakness" can be overcome. By building a solid understanding of basic electrical concepts and recognizing the limits of your expertise, you can gain confidence in tackling smaller electrical tasks and make informed decisions about when to seek professional help. Remember, empowering yourself with knowledge is the first step towards conquering your electric weakness and ensuring a safer, more comfortable home.

Expert FAQs:

1. Q: What is the most important safety precaution when working with electricity? A: Always disconnect the power supply before working on any electrical component. Use a non-contact voltage tester to verify that the power is off.
2. Q: What are the signs of faulty wiring that require immediate professional attention? A: Burning smells, flickering lights, hot outlets or switches, sparking appliances, and tripped circuit breakers that repeatedly reset themselves.
3. Q: Is it safe to work with electricity during a storm? A: No. Never work with electricity during a storm. The risk of electrocution is significantly increased during electrical storms.
4. Q: How can I identify the main electrical panel in my home? A: It's usually a metal box with a number of switches and breakers. Often located in the basement, garage, or utility closet.
5. Q: When should I call a qualified electrician instead of attempting a DIY repair? A: Whenever you're unsure about any aspect of the repair, dealing with high-voltage systems, undertaking major electrical work, or if you are uncomfortable with the task. Safety should always be the priority.
